Homework 5.3.2.1

1/1 point (graded)

Let A and B be matrices and AB be well-defined and let B have at least four columns. The first and the fourth column of B are the same.

The first and fourth columns of AB are the same.

Always ✔ Answer: Always

Explanation

Transcripted in final section of this week

Answer: Always

Partition

$$B = \begin{pmatrix} b_0 & b_1 & b_2 & b_3 & B_4 \end{pmatrix},$$

where B_4 represents the part of the matrix to the right of the first four columns. Then

$$AB = A\begin{pmatrix} b_0 & b_1 & b_2 & b_3 & B_4 \end{pmatrix} = \begin{pmatrix} Ab_0 & Ab_1 & Ab_2 & Ab_3 & AB_4 \end{pmatrix}.$$

Now, if $b_0 = b_3$ then $Ab_0 = Ab_3$ and hence the first and fourth columns of AB are equal.

Homework 5.3.2.2

1/1 point (graded)

Let A and B be matrices and AB be well-defined and let A have at least four columns. The first and fourth columns of A are the same.

The first and fourth columns of AB are the same.

Sometimes ✔ Answer: Sometimes

Explanation

Answer: Sometimes To find an example where the statement is *true*, we first need to make sure that the result has at least four columns, which means that B must have at least four columns. Then an example when the statement is *true*: $A = 0$ (the zero matrix) or $B = I$ (the identity matrix of size at least 4×4).
An example when it is *false*: Almost any matrices A and B. For example:

$$A = \begin{pmatrix} 0 & 1 & 2 & 0 \\ 0 & 1 & 2 & 0 \end{pmatrix}, \quad B = \begin{pmatrix} 1 & 0 & 0 & 0 \\ 0 & 1 & 0 & 0 \\ 0 & 0 & 1 & 1 \\ 0 & 0 & 0 & 1 \end{pmatrix}$$

so that

$$\begin{pmatrix} 0 & 1 & 2 & 0 \\ 0 & 1 & 2 & 0 \end{pmatrix} \begin{pmatrix} 1 & 0 & 0 & 0 \\ 0 & 1 & 0 & 0 \\ 0 & 0 & 1 & 1 \\ 0 & 0 & 0 & 1 \end{pmatrix} = \begin{pmatrix} 0 & 1 & 2 & 2 \\ 0 & 1 & 2 & 2 \end{pmatrix}$$

Calculator

$$AB = \begin{pmatrix} 0 & 1 & 2 & 0 \\ 0 & 1 & 2 & 0 \end{pmatrix} \cdot \begin{pmatrix} 0 & 1 & 0 & 0 \\ 0 & 0 & 1 & 1 \\ 0 & 0 & 0 & 1 \end{pmatrix} = \begin{pmatrix} 0 & 1 & 2 & 2 \\ 0 & 1 & 2 & 2 \end{pmatrix}.$$

Homework 5.3.2.3

18/18 points (graded)

Compute each of the following matrix-matrix multiplications:

$$\left(\begin{array}{rrr} 1 & -2 & 2 \\ -1 & 2 & 1 \\ 0 & 1 & 2 \end{array}\right) \left(\begin{array}{r|c} -1 & \\ 2 & \\ 1 & \end{array}\right)$$

$$= \begin{pmatrix} -3 \\ 6 \\ 4 \end{pmatrix}$$

-3 ✔ Answer: -3

6 ✔ Answer: 6

4 ✔ Answer: 4

$$\left(\begin{array}{rrr} 1 & -2 & 2 \\ -1 & 2 & 1 \\ 0 & 1 & 2 \end{array}\right) \left(\begin{array}{rr|c} -1 & 0 & \\ 2 & 1 & \\ 1 & -1 & \end{array}\right)$$

$$= \begin{pmatrix} -3 & -4 \\ 6 & 1 \\ 4 & -1 \end{pmatrix}$$

-3 ✔ Answer: -3 -4 ✔ Answer: -4

6 ✔ Answer: 6 1 ✔ Answer: 1

4 ✔ Answer: 4 -1 ✔ Answer: -1

$$\left(\begin{array}{rrr} 1 & -2 & 2 \\ -1 & 2 & 1 \\ 0 & 1 & 2 \end{array}\right) \left(\begin{array}{rr|r} -1 & 0 & 1 \\ 2 & 1 & -1 \\ 1 & -1 & 2 \end{array}\right)$$

$$= \begin{pmatrix} -3 & -4 & 7 \\ 6 & 1 & -1 \\ 4 & -1 & 3 \end{pmatrix}$$

Homework 5.3.2.4

1/1 point (graded)

Algorithm: $C := \text{GEMM\_UNB\_VAR1}(A, B, C)$

Partition $B \rightarrow \left(\begin{array}{c|c} B_L & B_R \end{array}\right)$, $C \rightarrow \left(\begin{array}{c|c} C_L & C_R \end{array}\right)$
where B_L has 0 columns, C_L has 0 columns

while $n(B_L) < n(B)$ **do**

Repartition

$$\left(\begin{array}{c|c} B_L & B_R \end{array}\right) \rightarrow \left(\begin{array}{c|c|c} B_0 & b_1 & B_2 \end{array}\right), \left(\begin{array}{c|c} C_L & C_R \end{array}\right) \rightarrow \left(\begin{array}{c|c|c} C_0 & c_1 & C_2 \end{array}\right)$$
where b_1 has 1 column, c_1 has 1 column

$c_1 := Ab_1 + c_1$

Continue with

$$\left(\begin{array}{c|c} B_L & B_R \end{array}\right) \leftarrow \left(\begin{array}{c|c|c} B_0 & b_1 & B_2 \end{array}\right), \left(\begin{array}{c|c} C_L & C_R \end{array}\right) \leftarrow \left(\begin{array}{c|c|c} C_0 & c_1 & C_2 \end{array}\right)$$

endwhile

Write the routine

- `[ C_out ] = Gemm_unb_var1( A, B, C )`

that computes $C := AB + C$ using the above algorithm.

Some links that will come in handy:

- Spark (alternatively, open the file `LAFF-2.0xM -> Spark -> index.html`)
- PictureFLAME (alternatively, open the file `LAFF-2.0xM -> PictureFLAME -> PictureFLAME.html`)

The update $c_1 := Ab_1 + c_1$ can be accomplished by the call to

Calculator

```
laff_gemv( 'No transpose', 1, ..., ...., 1, .... )
```

(click on the "laff routines" tab at the top of the page for more info).

You may want to use the following script to test your implementations:

- test_Gemm_unb_var1.m
