Question 1

1/1 point (graded)

Which of the following are reasons to avoid using a pie chart, particularly when comparing the percentages of many different things? (Select all that apply)

- [x] a. Too many divisions can lead to very thin slices which are not easily comparable
- [ ] b. Pie charts are not self-explanatory
- [x] c. In general, people are not very good at comparing surfaces and angles

✔

Explanation

Prof. Duflo mentions both A and C as reasons to avoid using pie charts. While it is true that a pie chart that is not properly labeled may not self-explanatory, this is not an inherent property of pie charts and so B is incorrect.

Submit You have used 1 of 2 attempts

✔ Correct (1/1 point)
