R ggplot geom_bar() label bars (with 'count')

I have a ggplot like this:

```
ggplot(df, aes(x=DateDiff, fill=TEAM)) + geom_bar()
```

How can I label the bars with the results from the y axis, when there's no y axis defined? (without altering the df)

if you want it on top of eachbar, then use `geom_text()` – [joel.wilson](#) 1 hour ago

`geom_text` needs y axis for the label. See how [@joel.wilson](#) got the y axis in the answer he gave and solved my problem – [adlisval](#) 39 mins ago

1 Answer

```
ggplot(mtcars, aes(x = gear)) + geom_bar()+  
  geom_text(stat='count', aes(label=..count..), vjust=-1)
```

Please provide an example image, so that one can see the plot this code creates – [loki](#) 53 mins ago
