5.2.6 Exam: Identify the sample mean distribution

 Bookmark this page

Exams due Sep 27, 2023 05:00 IST Completed

For the questions below, consider the following two probability density functions:

- A normal distribution with expectation $\mu = 8$ and standard deviation $\sigma = 0.4$.
- A bimodal uniform distribution with 25% of the values between $0 < x < 1$ and the other 75% between $10 < x < 11$.

Plots of these densities are shown in the plot below.

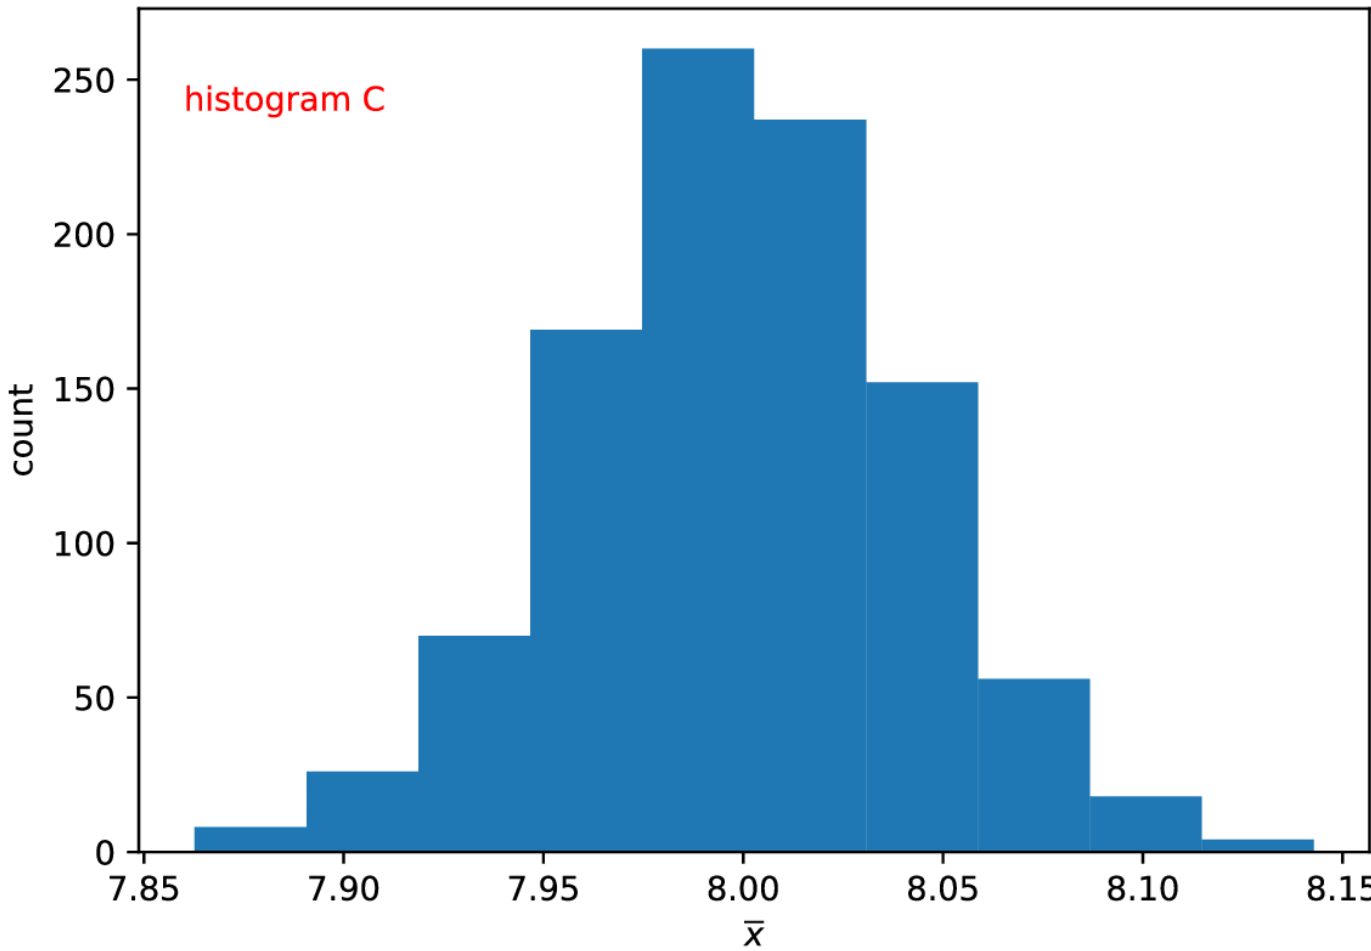

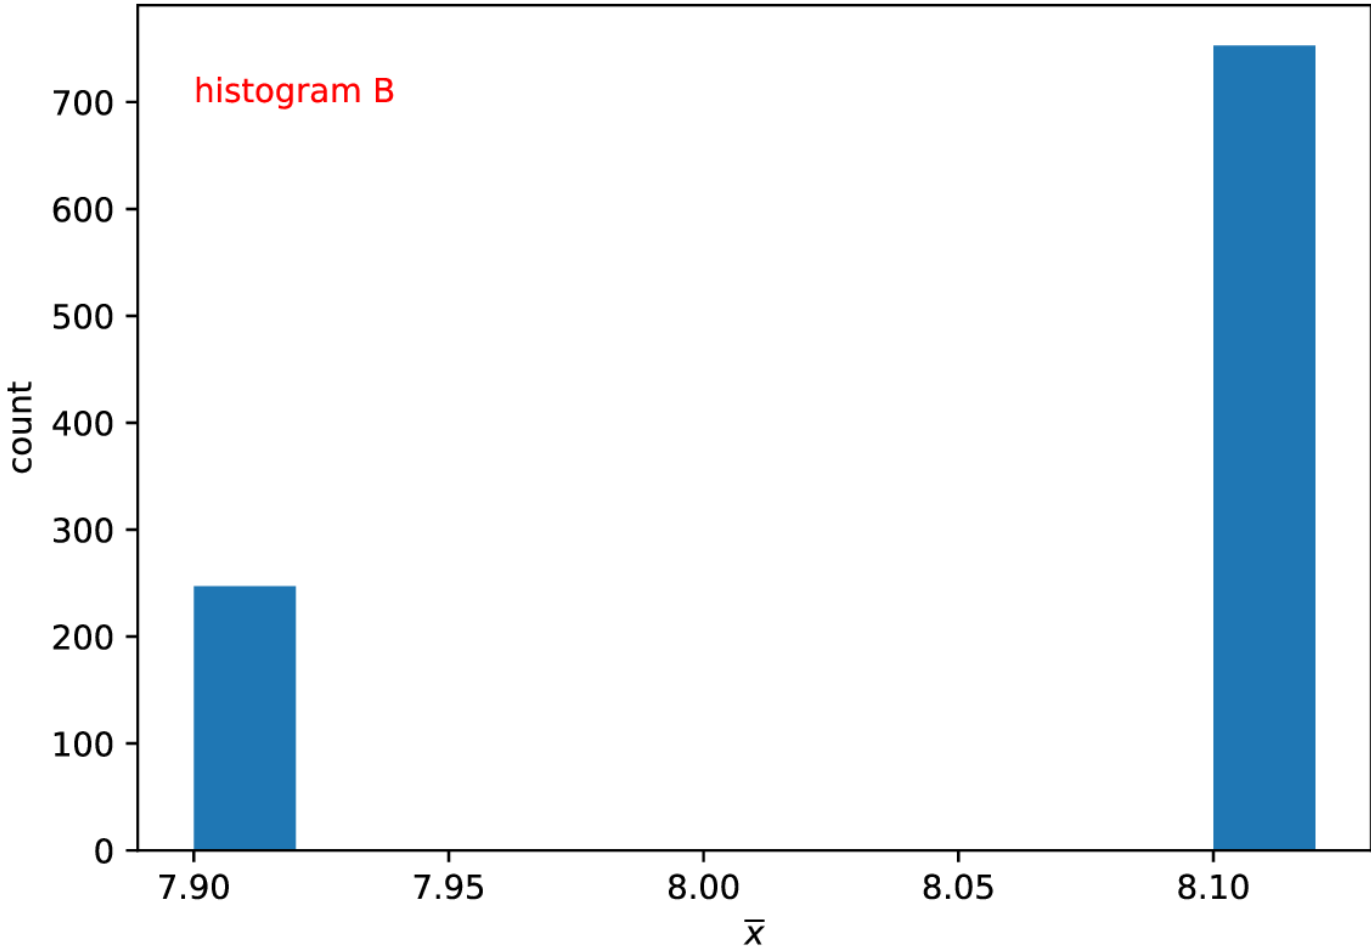

Problem: Sample mean histogram for normal distribution

2.0/2.0 points (graded)

Suppose that this normal distribution is sampled with a sample size $N = 10,000$ and the mean of the sample is calculated. This is done 1,000 times so that there are 1,000 sample means \bar{x}_i for $i = 0$ to 999 . Of the following histograms, which would you expect to observe for the distribution of these sample means \bar{x}_i ?

- ☐ histogram A
- ☐ histogram B
- ☐ histogram C
- ☒ histogram D

Submit

Problem: Sample mean histogram for bimodal uniform distribution

2.0/2.0 points (graded)
Suppose that this bimodal uniform distribution is sampled in the same manner (with a sample size $N = 10,000$, and 1,000 times so that there are 1,000 sample means \bar{x}_i for $i = 0$ to 999). Selecting from the same histograms above, which would you expect to observe for the distribution of these sample means \bar{x}_i ?

- ☐ histogram A
- ☐ histogram B
- ☒ histogram C
- ☐ histogram D

Submit
