# Homework 6.5.1.1

1/1 point (ungraded)  
We have created an additional version of the "Gaussian Elimination" webpage:

- Practice with four equations in four unknowns.

We always joke that in a standard course on matrix computations the class is asked to solve systems with three equations with pencil and paper. What defines an honor version of the course is that the class is asked to solve systems with four equations with pencil and paper...

Of course, there is little insight gained from the considerable extra work. However, here we have webpages that automate most of the rote work, and hence it IS worthwhile to at least observe how the methodology extends to larger systems. DO NOT DO THE WORK BY HAND. Let the webpage do the work and focus on the insights that you can gain from this.

☒ done
