Question 1

1/1 point (graded)

True or False: A conditional expectation is simply an expectation of a conditional distribution.

☒ a. True ✓

☐ b. False

Explanation

This is true. A condition expectation is simply an expectation of a conditional distribution. Equivalently,

$$E[Y|X] = \int y f_{y|x}(y|x) dy.$$

Question 2

1/1 point (graded)

The “Law of Iterated Expectations” states that:

- ☒ a. The expectation of the expectation of Y given X is equal to the expectation of Y ✓
- ☐ b. The expectation of Y given X is equal to the expectation of X given Y
- ☐ c. The expectation of Y given X is equal to the expectation of Y multiplied by the expectation of X
- ☐ d. The expectation of the expectation of Y given X is equal to the expectation of Y multiplied by the expectation of X

Explanation

The “law of iterated expectations” holds that the expectation of the expectation of Y given X is equal to the expectation of Y . Equivalently, $E[E[Y|X]] = E[Y]$.

✓ Correct (1/1 point)

Question 3

1/1 point (graded)

The “Law of Total Variance” states that:

- ☐ a. The variance of the expectation of Y is equal to the variance of Y given X added to the expectation of the variance of X given Y
- ☐ b. The variance of Y is equal to the variance of Y given X added to the variance of X given Y
- ☐ c. The variance of the expectation of Y is equal to the variance of Y given X added to the variance of X given Y
- ☒ d. The variance of Y is equal to the variance of the expectation of Y given X added to the expectation of the variance of Y given X ✓

Explanation

The “law of total variance” holds that variance of Y is equal to the variance of the expectation of Y given X added to the expectation of the variance of Y given X . Equivalently,
$$\text{Var}(E[Y|X]) + E[\text{Var}(Y|X)] = \text{Var}(Y).$$
