

Negative Binomial Series

The [Series](#) which arises in the [Binomial Theorem](#) for [Negative](#) integral n ,

$$\begin{aligned}(x+a)^{-n} &= \sum_{k=0}^{\infty} \binom{-n}{k} x^k a^{-n-k} \\ &= \sum_{k=0}^{\infty} (-1)^k \binom{n+k-1}{k} x^k a^{-n-k}.\end{aligned}$$

For $a = 1$, the negative binomial series simplifies to

$$(x+1)^{-n} = 1 - nx + \frac{1}{2}n(n+1)x^2 - \frac{1}{6}n(n+1)(n+2)x^3 + \dots$$
