Here's the explanation you wrote:

no it does not affect

Here is feedback from the instructional team:

Here are some observations. These are explored more in the summary quiz.

- Changing c changes the location of the horizontal asymptote. It appears c needs to be between 0 and 1, since otherwise we get a decreasing curve.
- Changing b changes how the graph is shifted left or right. It appears b can be any number, positive or negative.
- Changing a changes how steeply the graph increases. It seems that a can be any positive number.
