Question 1

1/1 point (graded)

True or False: Sentiment analysis is a way of using language to infer whether a particular statement is positive or negative.

☒ a. True ✓☐ b. False

You have used 1 of 1 attempt

✓ Correct (1/1 point)

Question 2

0/1 point (graded)

True or False: Generally, when approaching a computational problem such as sentiment analysis, the artificial intelligence community first determines how humans could more efficiently and effectively perform the task at hand, and then programs algorithms that aim to be superior to human knowledge.

☒ a. True ❌

☐ b. False

Explanation

As described by Professor Mullainathan, the artificial intelligence approach to sentiment analysis and other computational problems consists of understanding how humans complete the task so perfectly and then trying to imitate the same performance through machines and algorithms.
