How to upgrade scikit-learn package in anaconda

I am trying to upgrade package of scikit-learn from 0.16 to 0.17. For that I am trying to use binaries from this website: <http://www.lfd.uci.edu/~gohlke/pythonlibs/#scikit-learn>. I have Windows 7 x64 bit. I downloaded the relevant package locally and gave following commands and got Requirement already up-to-date:

```
C:\Users\skumar>pip install --upgrade --use-wheel --no-index --find-links=../../SOURCE/APPS scikit-learn
Ignoring indexes: https://pypi.python.org/simple
Requirement already up-to-date: scikit-learn in c:\anaconda3\lib\site-packages
```

Then I tried to upgrade it from remote site and got similar result:

```
C:\Users\skumar>pip install --upgrade --use-wheel --no-index --trusted-host www.lfd.uci.edu --find-links=http://www.lfd.uci.edu/~gohlke/pythonlibs/ scikit-learn
Ignoring indexes: https://pypi.python.org/simple
Requirement already up-to-date: scikit-learn in c:\anaconda3\lib\site-packages
```

On Remote site there are two versions i.e., 0.16 & 0.17. Is there a way to specify version in command? Or how do you install/upgrade wheel file?

python scikit-learn

I would suggest using conda. Conda is an anaconda specific package manager. If you want to know more about conda, read [the conda docs](#).

Using conda in the command line, the command below would install scipy 0.17.

```
conda install scipy=0.17.0
```

When I did this and wrote a simple statement `import sklearn` I am getting this error: DLL load failed, Access is denied. The reason given is something like this: ERROR: An unexpected error occurred while tokenizing input The following traceback may be corrupted or invalid The error message is: ('EOF in multi-line string', (1, 2)) – [Sanoj](#) Nov 12 '15 at 20:48

Like [@jakedvp](#) mentioned in his comment, you need to make sure you have the correct permissions set for your anaconda directory. To check this, go to the directory containing anaconda and type `ls -l`. Find anaconda and look at the left most column where permissions are defined for user, groups, and others. It should look something like this `drwxr-xr-x`. What you should care about are the first the characters, these are your permissions for that directory as a user. – [Austin A](#) Nov 13 '15 at 15:40

Work on work you love. From home.

Anaconda comes with the `conda` package manager which is designed to handle these kinds of upgrades. Start by updating conda itself to get the most recent package lists:

```
conda update conda
```

And then install the version of scikit-learn you want

```
conda install scikit-learn=0.17
```

All necessary dependencies will be upgraded as well. If you have trouble with conda on Windows, there are some relevant FAQ here: <http://docs.continuum.io/anaconda/faq>

Thanks. I did that and when I executed "import sklearn" then I got this error: DLL load failed: Access is denied. Then I uninstalled sklearn by command `conda remove scikit-learn` and installed it again. I am still getting this error. I am using Python 3.4.3 [Anaconda 2.3.0 (64-bit)] – [Sanoj](#) Nov 12 '15 at 20:29

-
- 1 You probably have a permissions issue in the directory where anaconda is installed: you should make sure users have read/execute permissions. – [jakevdp](#) Nov 12 '15 at 21:10
