## numpy.argsort

**numpy.argsort(*a*, *axis*=-1, *kind*='quicksort', *order*=None)** [source]  
(<http://github.com/numpy/numpy/blob/v1.9.1/numpy/core/fromnumeric.py#L795>)

Returns the indices that would sort an array.

Perform an indirect sort along the given axis using the algorithm specified by the *kind* keyword. It returns an array of indices of the same shape as *a* that index data along the given axis in sorted order.

**Parameters:** *a* : *array\_like*

Array to sort.

*axis* : *int* or *None*, *optional*

Axis along which to sort. The default is -1 (the last axis). If *None*, the flattened array is used.

*kind* : {'quicksort', 'mergesort', 'heapsort'}, *optional*

Sorting algorithm.

*order* : *list*, *optional*

When *a* is an array with fields defined, this argument specifies which fields to compare first, second, etc. Not all fields need be specified.

**Returns:** *index\_array* : *ndarray*, *int*

Array of indices that sort *a* along the specified axis. In other words, *a*[*index\_array*] yields a sorted *a*.

[argpartition \(numpy.argpartition.html#numpy.argpartition\)](#) Indirect partial sort.

### Notes

See [sort \(numpy.sort.html#numpy.sort\)](#) for notes on the different sorting algorithms.

As of NumPy 1.4.0 `argsort` works with real/complex arrays containing nan values. The enhanced sort order is documented in [sort \(numpy.sort.html#numpy.sort\)](#).

## Examples

---

One dimensional array:

```
>>> x = np.array([3, 1, 2]) >>> np.argsort(x)
array([1, 2, 0])
```

Two-dimensional array:

```
>>> x = np.array([[0, 3], [2, 2]]) >>> x
array([[0, 3],
       [2, 2]])
```

```
>>> np.argsort(x, axis=0) >>>
array([[0, 1],
       [1, 0]])
```

```
>>> np.argsort(x, axis=1) >>>
array([[0, 1],
       [0, 1]])
```

Sorting with keys:

```
>>> x = np.array([(1, 0), (0, 1)], dtype=[('x', '<i4'), ('y', '<i4')]) >>>
>>> x
array([(1, 0), (0, 1)],
      dtype=[('x', '<i4'), ('y', '<i4')])
```

```
>>> np.argsort(x, order=('x','y')) >>>
array([1, 0])
```

```
>>> np.argsort(x, order=('y','x')) >>>
array([0, 1])
```
