## Evaluating Multiple Interventions - Quiz

🔖 Bookmark this page

### Question 1

1/1 point (graded)

What is the main question of interest in the Indonesia rice experiment?

- ☐ a. Does the Raskin rice program improve nutrition among poor households?
- ☐ b. Is there corruption in the Raskin rice program?
- ☒ c. Will program transparency increase the amount of subsidy eligible households receive? ✓
- ☐ d. Does common knowledge facilitate collective action?

### Explanation

By providing information cards to eligible households, the experiment is testing whether more transparency from the cards leads to eligible households receiving more subsidies. They do not test nutrition outcomes. They do not directly test the degree of corruption. The common knowledge question is a possible mechanism through which program transparency increases subsidies received.

## Functions of Random Variable

- ▶ Module 5: Moments of a Random Variable, Applications to Auctions, & Intro to Regression
- ▶ Module 6: Special Distributions, the Sample Mean, the Central Limit Theorem, and Estimation
- ▶ Module 7: Assessing and Deriving Estimators - Confidence Intervals, and Hypothesis Testing
- ▶ Module 8: Causality, Analyzing Randomized Experiments, & Nonparametric Regression
- ▶ Module 9: Single and Multivariate Linear

✓ Correct (1/1 point)

### Question 2

1/1 point (graded)

What possible mechanism did the coupon sub-treatment test?

- ☐ a. Whether common knowledge facilitated collective action
- ☐ b. Whether the physical card mattered in bargaining
- ☐ c. Whether the information on the card mattered
- ☒ d. Whether implied checking-in on the part of the government changed the results ✓

### Explanation

The coupons were meant to imply that the government would check whether the correct amount of rice was distributed. This implied accountability could make the distributors of the rice less corrupt. The other options were mechanisms tested by the other sub-treatments.
