[SOLVED] This grader is insane

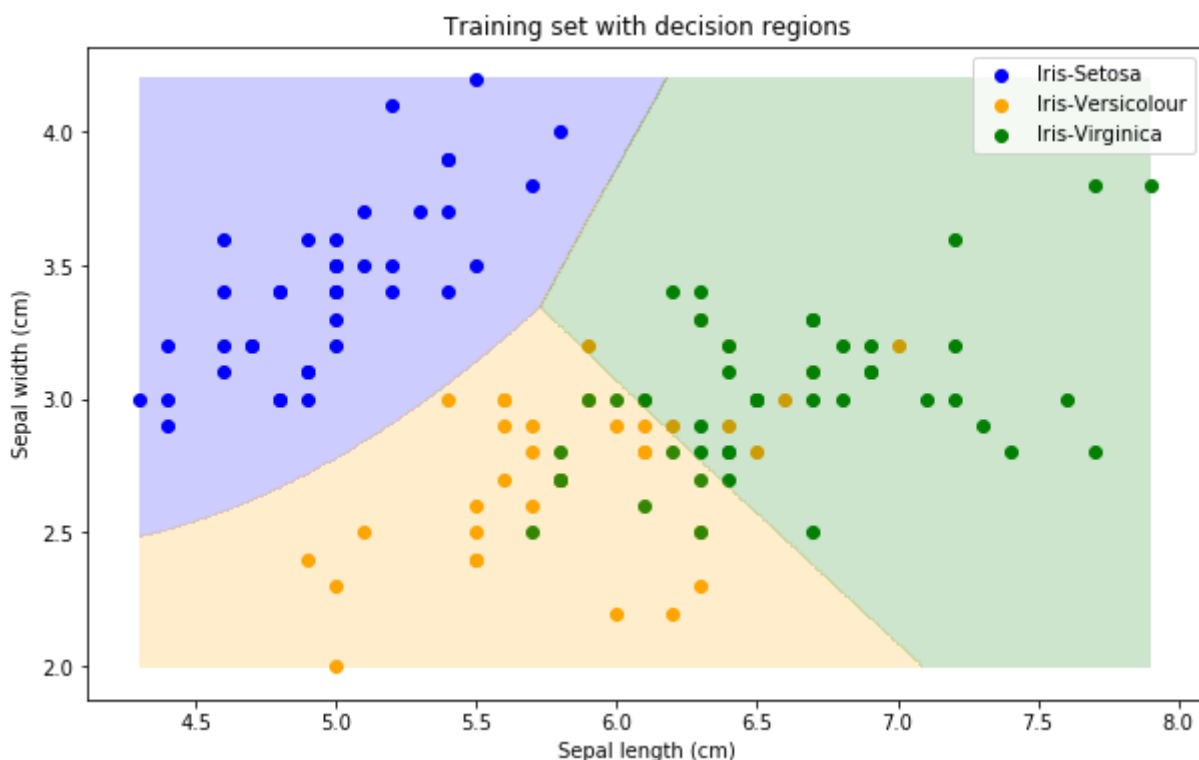

AE **Adrián Berges Enfedaque**

Or making me go insane :)

EDIT: the predict_class function is correct now (wasn't handling all possible input shapes correctly). Still st added more info on it.

EDIT2: Thank you Marcos M., it was a type problem. After adding the casts (modified to `dtype=scale.dtype` error in the last function is that I was referencing an outside variable inside the function. After that I got 100

I am stuck on a 60/100. I believe I got everything right on general lines but maybe some little details remain boundaries are like this (accuracy on par with sklearn naive bayes):

As for learned stddevs, I got this:
