2. Multiple Choice

QQ-Plot

2/2 points (graded)

Consider an i.i.d. sample $X_1, X_2, \dots, X_n \stackrel{\text{iid}}{\sim} P$ that has been reordered as $X_{(1)} \leq X_{(2)} \leq \dots \leq X_{(n)}$. In the image below, we compare the empirical quantiles (from the data) to the standard Gaussian quantiles using a QQ-plot.

Does the distribution underlying the data have a heavier or lighter **right** tail than a Gaussian distribution?

☒ heavier

☐ lighter

Which of the following best represents the support of the distribution underlying the data?

☐ $(0, 1)$

☐ $(-2, 2)$

☐ $(1, 4)$

☒ $[0, \infty)$

☐ \mathbb{R}

Submit

Multivariate Gaussian

1/1 point (graded)

Let X and Y be two independent random variables with distribution $\mathcal{N}(0, 1)$. Which of the following statements are correct? (Choose all that apply.)

☒ (X, Y) is a Gaussian vector, i.e. a multivariate Gaussian variable

☒ $(X + Y)$ and $(X - Y)$ are independent

☐ $\text{Cov}(2X + Y, 3X) = 0$

☒ $(X, Y) \sim \mathcal{N}_2(0, I_2)$

Note: Partial credit is given

Median

1/1 point (graded)

Let X be a random variable with pdf $f(x) = \frac{1}{2}e^{-|x|}$, $x \in \mathbb{R}$. The median of X minimizes which of the following functions?

(The notation $m \mapsto m^2$ denotes the function that takes input m and gives output m^2 , and similarly for other output functions.)

☐ $m \mapsto \mathbb{E}(X - m)^2$ ✓

☒ $m \mapsto \mathbb{E}|X - m|$

☐ $m \mapsto m^4$ ✓

☐ $m \mapsto \text{Var}(X - m)$ ✓

Submit
