QUICK QUESTION 6 (1/1 point)

Plot the tree that we created using cross-validation. How many splits does it have?

Answer: 1

EXPLANATION

If you follow the R commands from the previous video, you can plot the tree with `prp(StevensTreeCV)`.

The tree with the best accuracy only has one split! When we were picking different minbucket parameters before, it seemed like this tree was probably not doing a good job of fitting the data. However, this tree with one split gives us the best out-of-sample accuracy. This reminds us that sometimes the simplest models are the best!
