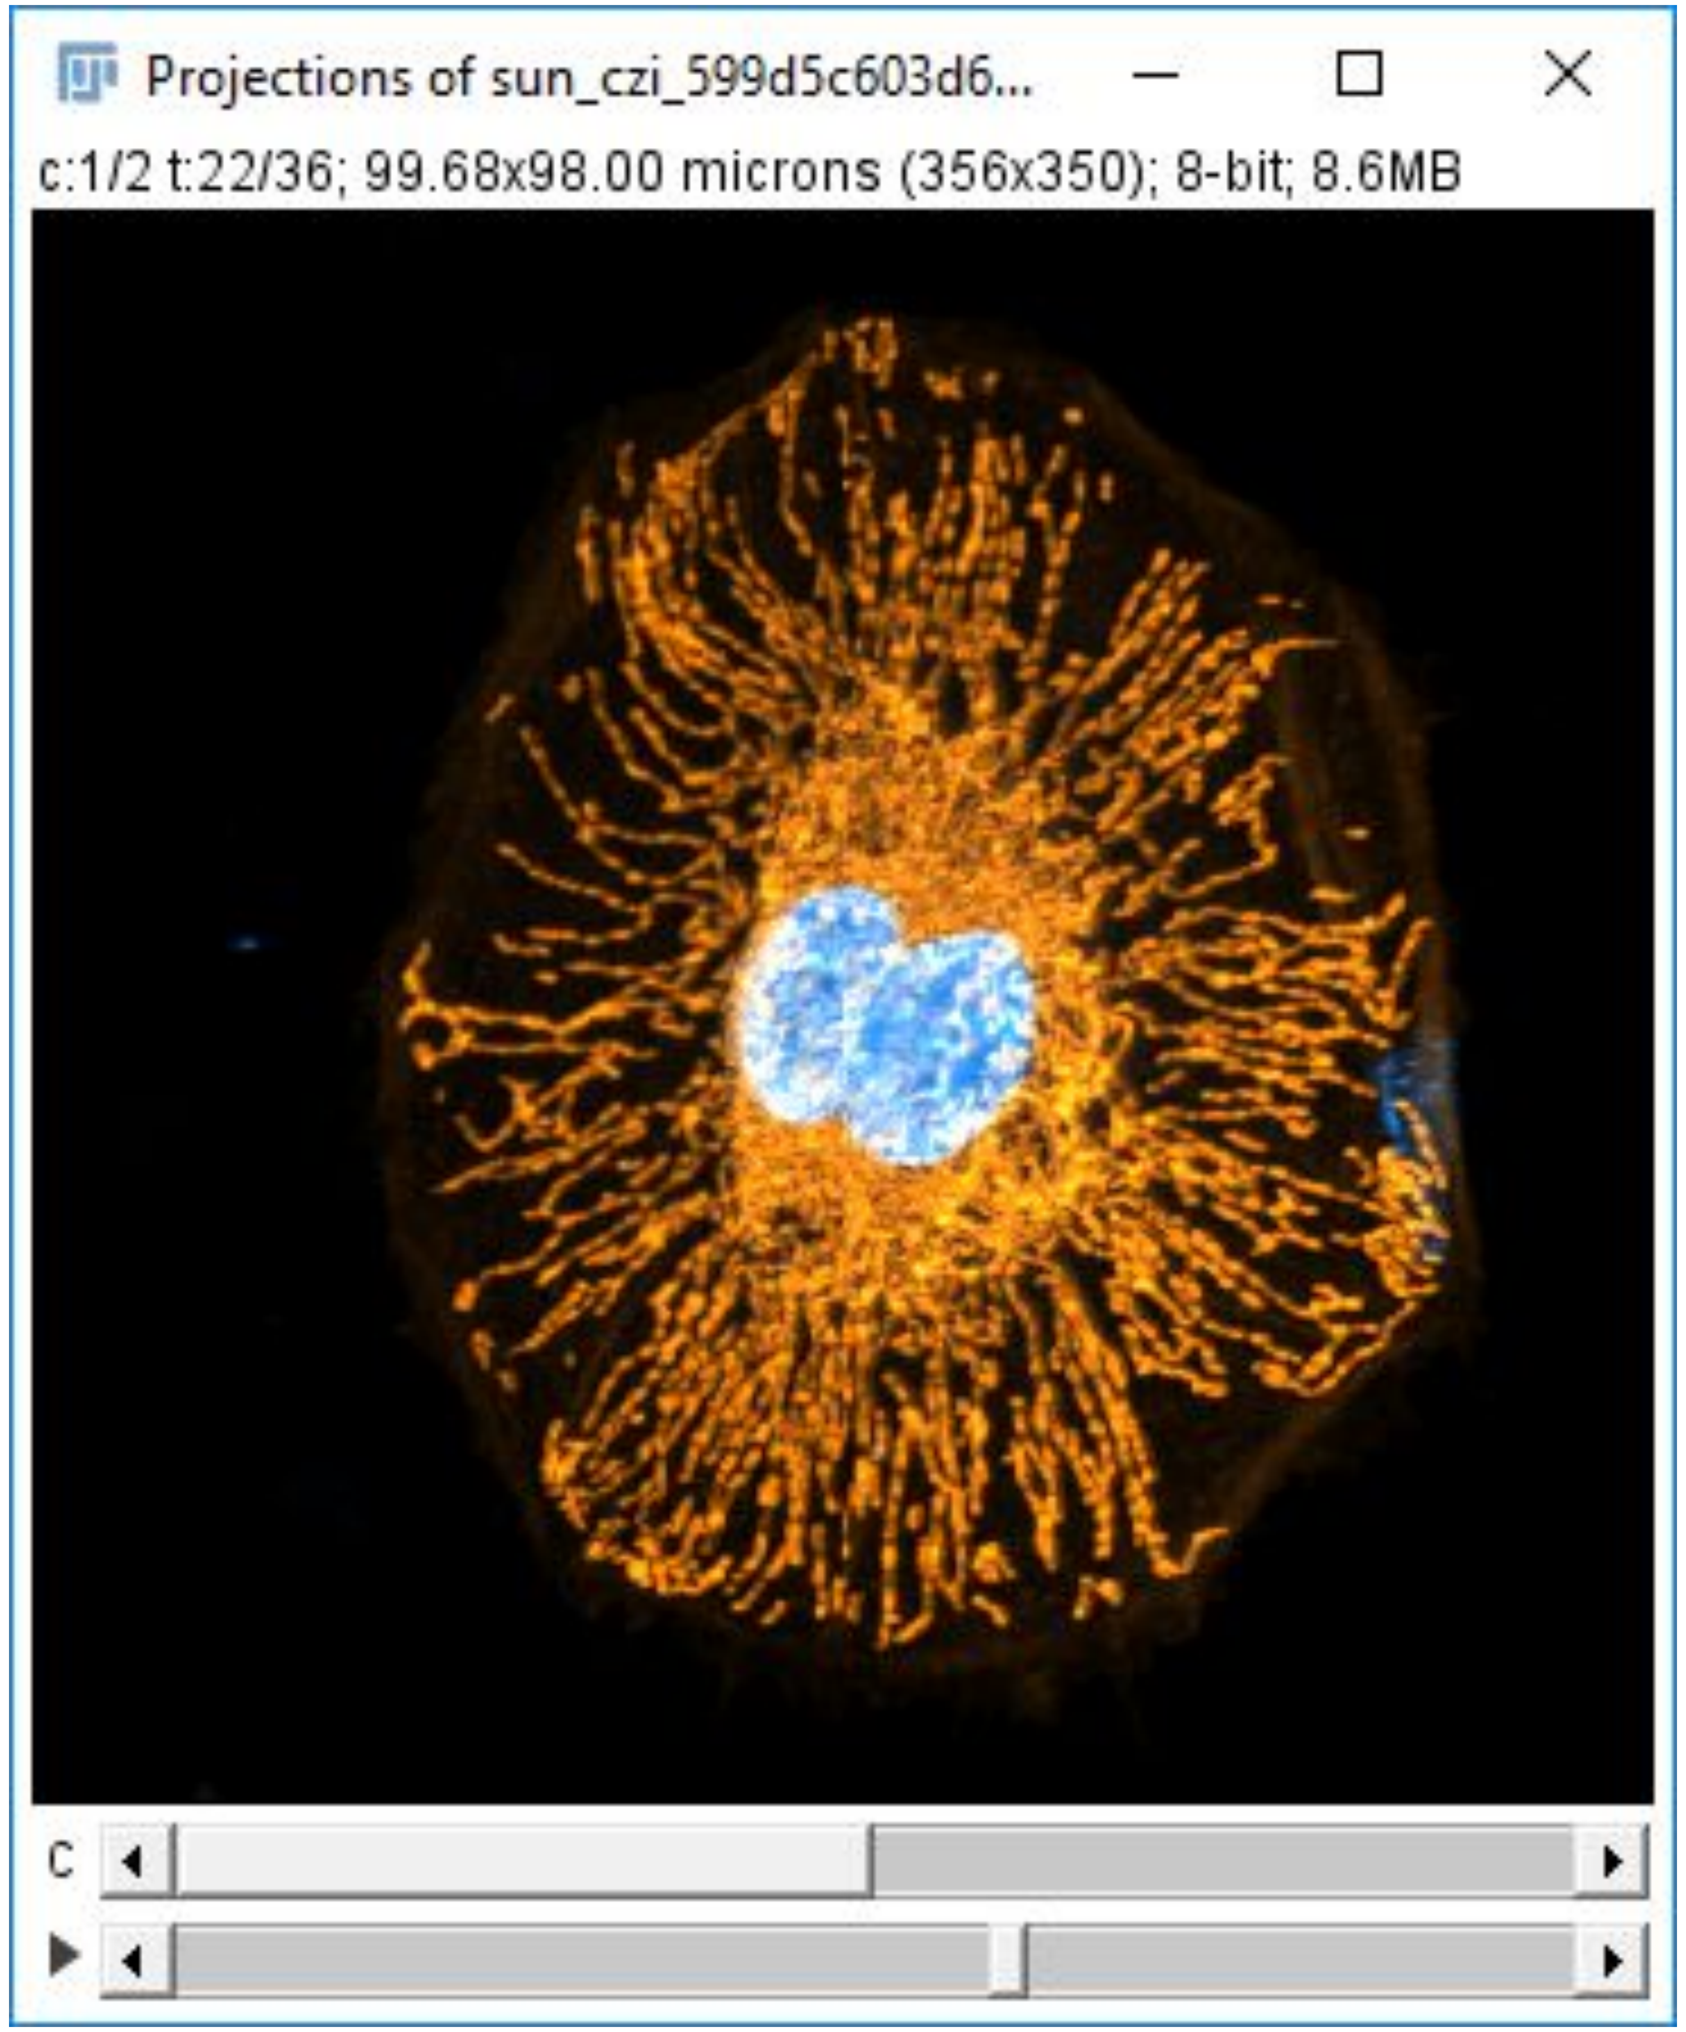
Simple Projection Methods

Image Processing & Analysis for Life Scientists

Olivier Burri, Romain Guiet & Arne Seitz

Projections for Animations

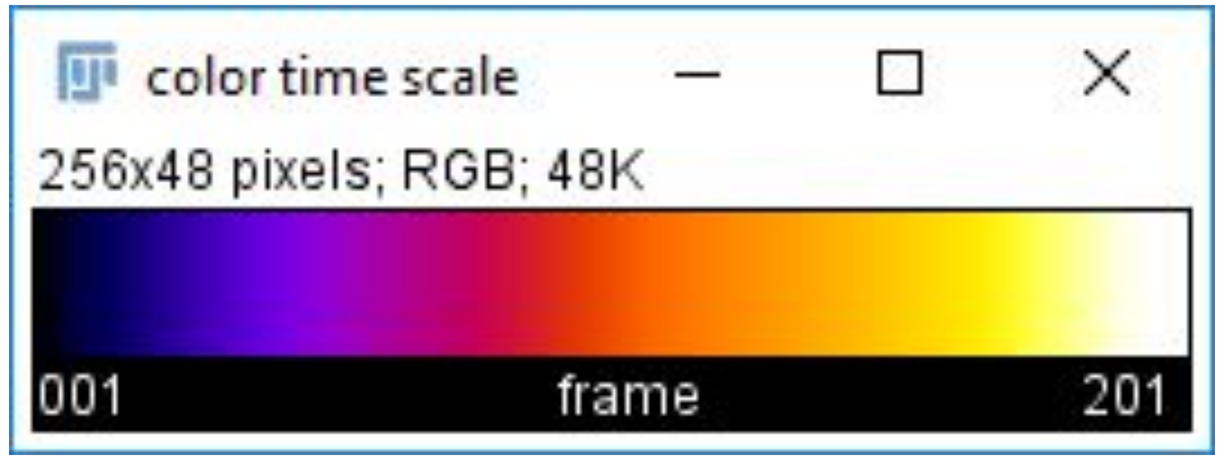
1. Open ***Deconvolved 2ch.tif***
2. Use Image→Stacks→Z-Project… with Max Intensity
3. **To make a rotation animation:** Use Image→Stacks→3D Project with defaults
4. Press the Play button

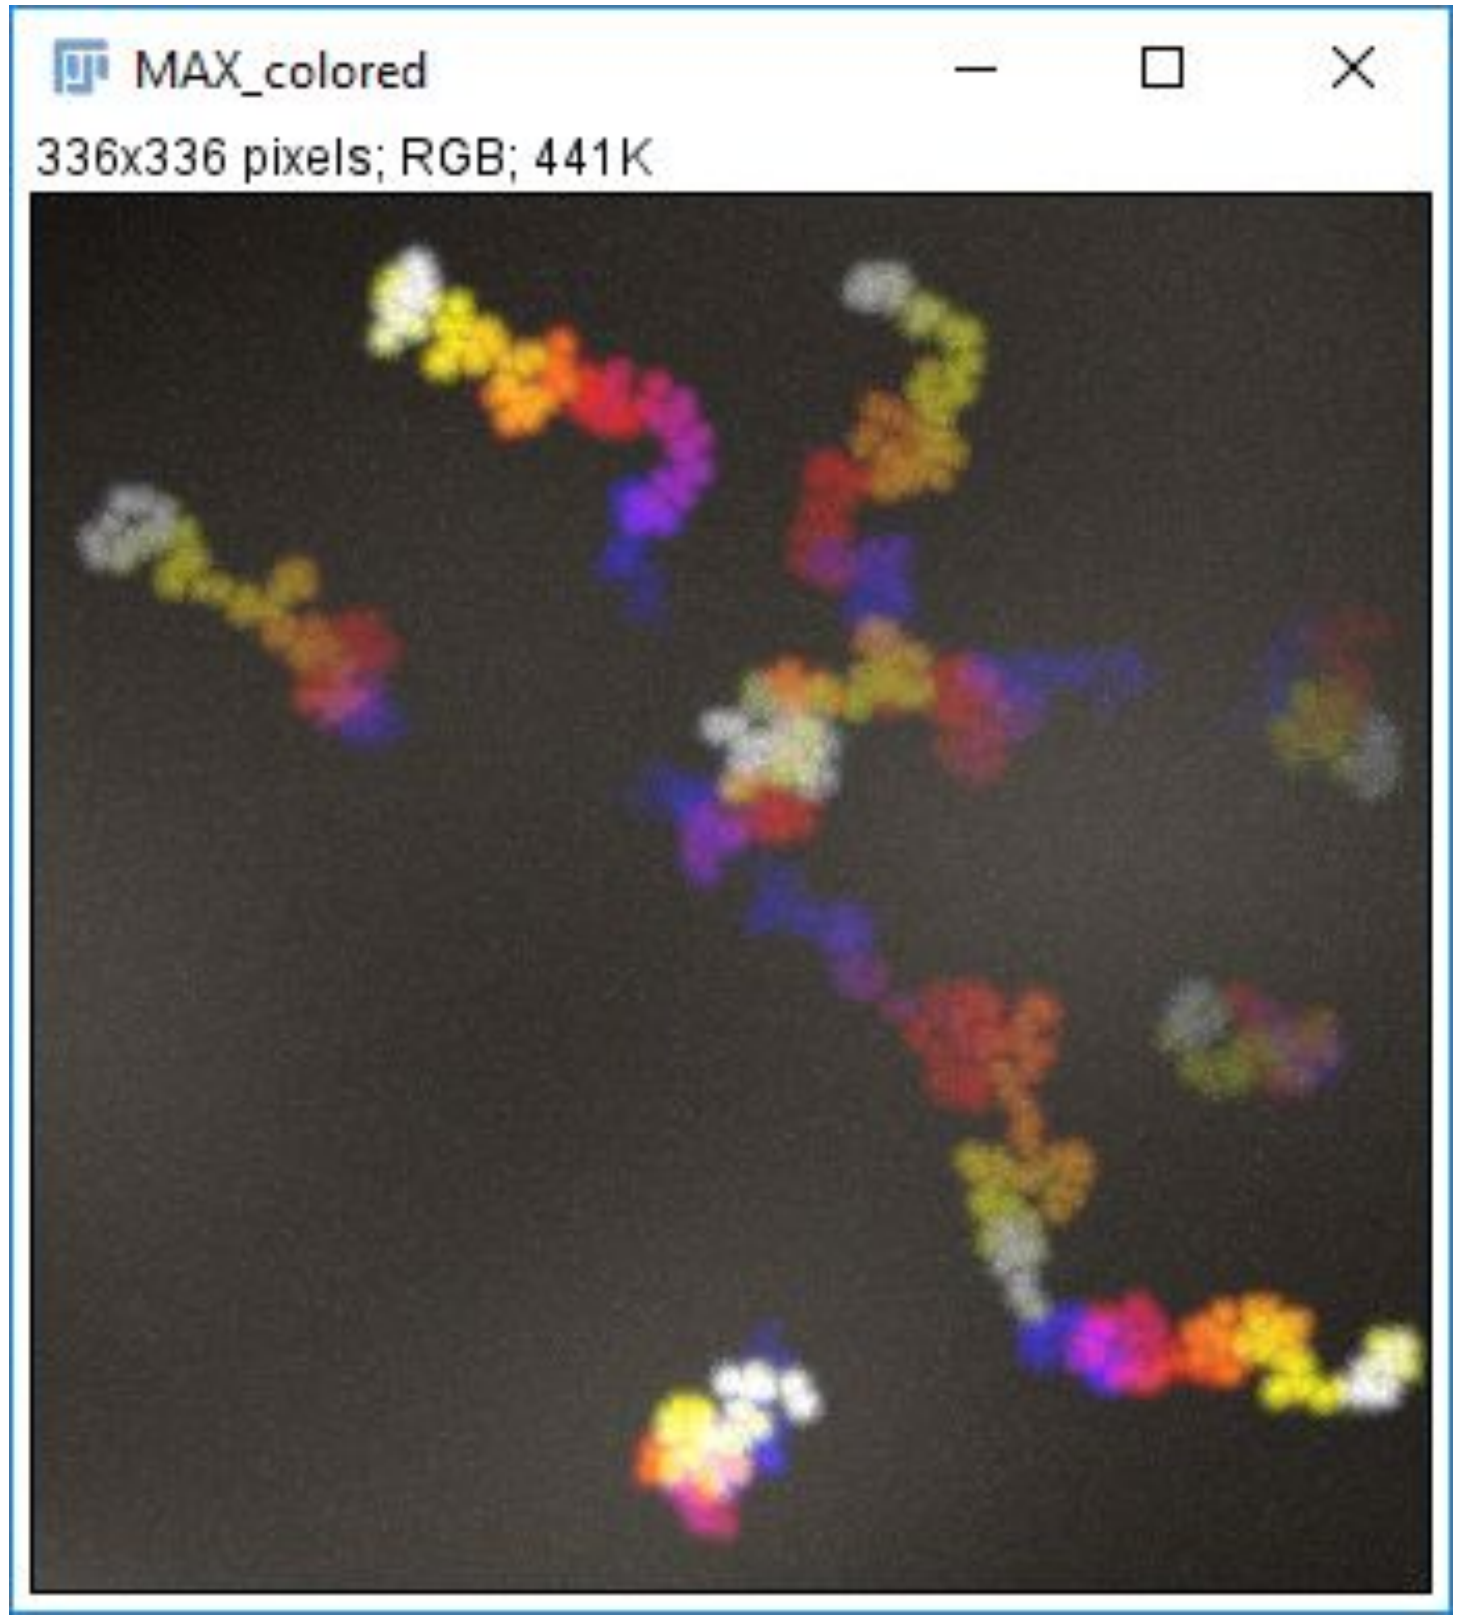


Temporal Color Code

1. Open ***Trajectories.tif***

2. Use **Image→Hyperstacks→Temporal Color Code…**
3. Study the parameters, but choose the defaults
4. See the resulting image and time color scalebar



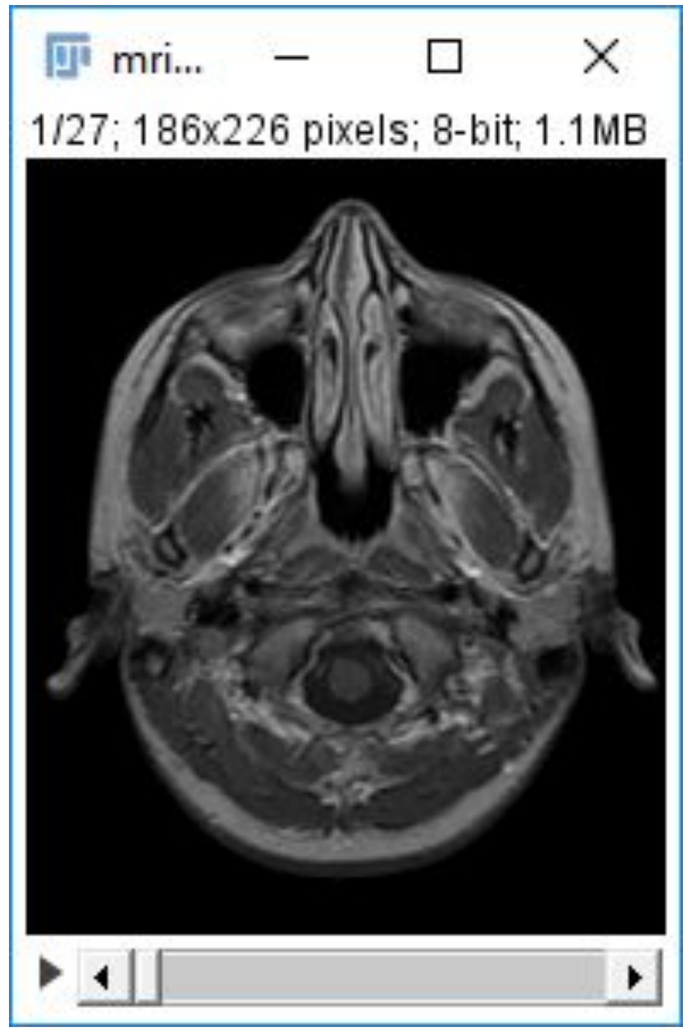


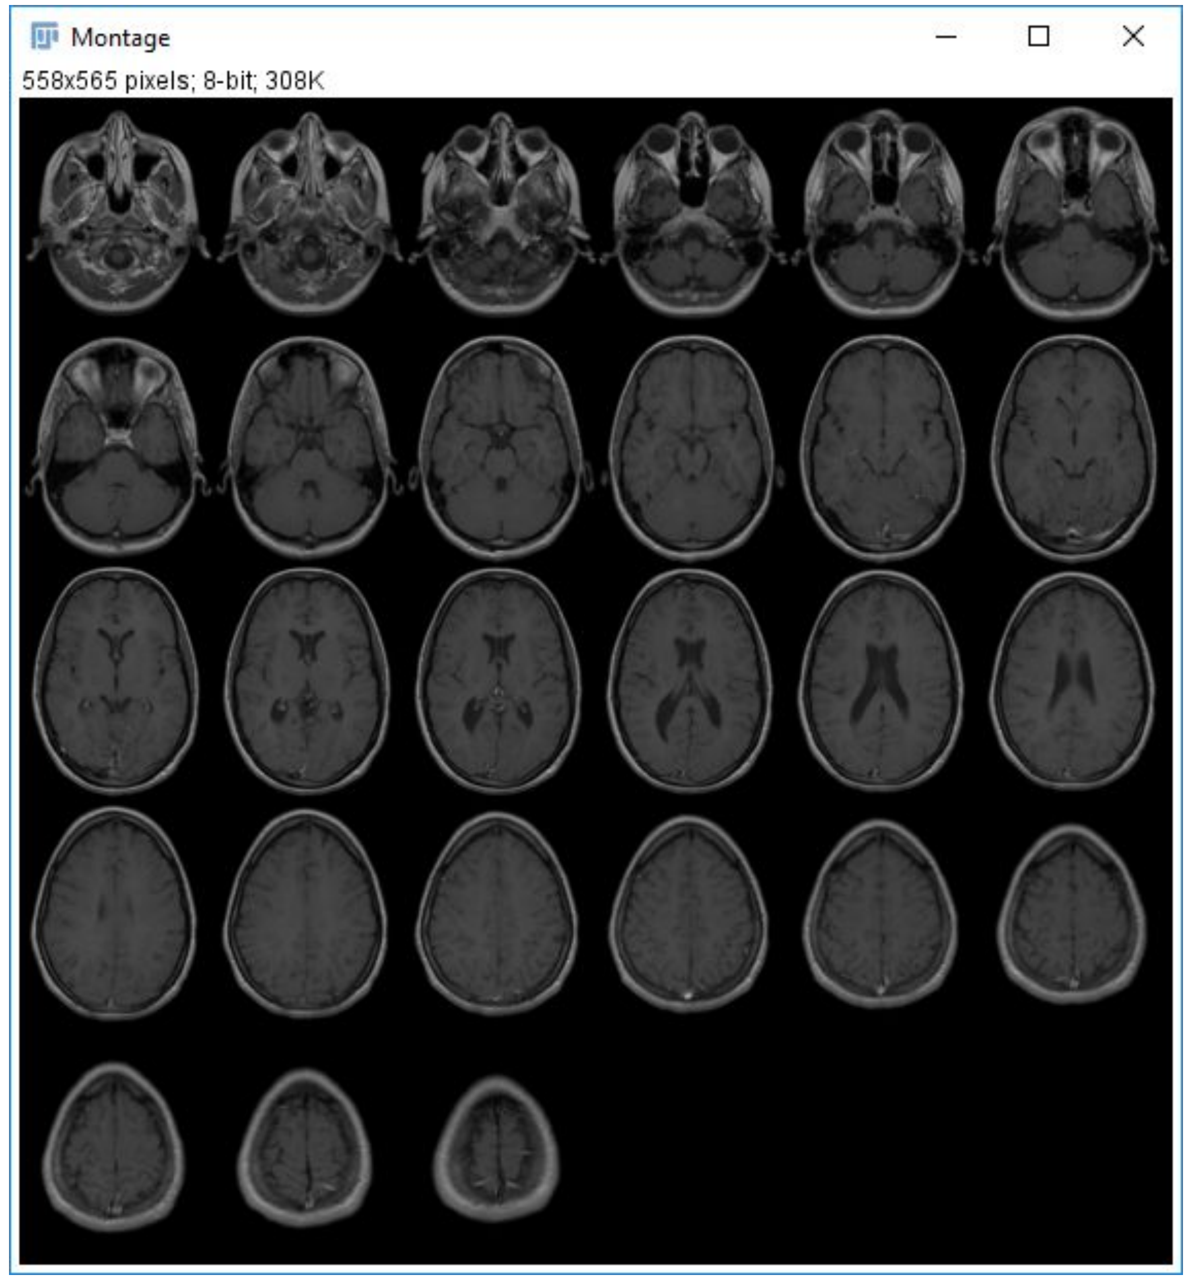
Montage and Grouped Projections

1. Open *MRI Stack* from Samples

2. Make a montage with **Image→Stacks→Make Montage** using default parameters

   This montage has a lot of slices, which makes it large. We could keep only one slice out of 3, but another trick is to make **Grouped Projections**





Montage and Grouped Projections

1. Open *MRI Stack* from Samples

2. Make a montage with **Image→Stacks→Make Montage** using default parameters
   This montage has a lot of slices, which makes it large. We could keep only one slice out of 3, but another trick is to make **Grouped Projections**
3. From the original image use **Image→Stacks→Tools→Grouped Z Project**
4. Choose **Max Intensity** and a group size of **3**
5. Re-run a **montage** with default parameters.
   *The montage has **3** times fewer slices, and each slice is the **MIP** of 3 of the original slices*
