7.5.2. Weekly Graded Assessment

Projection methods

4/4 points (graded)

Keyboard Help

PROBLEM

In the image below you can find six images obtained from a stack of images (see Exercise reslicing) and different projection methods. Move the projection method to the corresopnding image. Take the bit-depth into account.

FEEDBACK

Good work! You have completed this drag and drop problem.

Color and Color Models

2/2 points (graded)
Using ImageJ you convert one 8-bit greyscale image into a RGB image. Then you make a HSB conversion. Which of the following statements is true (multiple answers are possible)

- [ ] ImageJ does not support such an operation.
- [x] All pixel intensities in the Hue and the Saturation channel are zero.
- [ ] All pixel intensities in the Saturation and Brighness channel are zero.
- [ ] The corresponding pixel intensities of the three channels are identical.

Correct (2/2 points)

RGB-LAB

2/2 points (graded)

Using ImageJ you convert one 8-bit greyscale image into a RGB image. Then you make a LAB conversion. Which of the following statements is true (multiple answers are possible)

- [ ] ImageJ does not support such an operation.
- [ ] All pixel intensities in the L* and a* channel are zero.
- [x] The b* channel is an inverted image (bright background).
- [x] The L* and the a* channel are similar.
