QUICK QUESTION 4 (2/2 points)

In the previous video, we solved our optimization problem in LibreOffice. In your spreadsheet, change the demand for regular seats to 50 (cell D5). Then re-solve the model.

What is the new optimal objective value?

58458

58458

Answer: 58458

Now change the demand of regular seats to 200. What is the new optimal objective value?

102422

102422

Answer: 102422

EXPLANATION

For each of these questions, change the value in cell D5 to the new demand. Then select "Solver..." in the "Tools" menu, and hit solve. The problem should re-solve, and the new objective value is in the Objective cell (B8).
