## 7. Modes of convergence

Convergence in distribution

4/4 points (graded)

Let  $T_n$  be a sequence of random variables that converges to  $\mathcal{N}(0,1)$  in distribution. What family of distribution does the limit of  $2T_n+1$ belong to?

 $\chi^2$  distribution

Normal distribution

Call this limit  $\,Y\,$  . Compute:

**Generating Speech Output** 

$$\mathbb{E}\left[Y
ight]=igg|$$
 1

$$\mathsf{Var}[Y] = iggl[ 4 iggr]$$

Let  $\Phi$  be the cumulative distribution function (cdf) of the standard Gaussian distribution. In terms of  $\Phi$ , what is the limit, as  $n \to \infty$ , of  $\mathbf{P}(|T_n+2| \le 8)$ ?

(Write Phi, with capital P, for  $\Phi$  ).

Phi(6)-Phi(-10)

✓ Correct (4/4 points)

## Convergence in probability and variance

3/3 points (graded)

For  $n\geq 2$  , let  $X_n$  be a random variable such that  $\mathbf{P}\left(X_n=rac{1}{n}
ight)=1-rac{1}{n^2}$  and  $\mathbf{P}\left(X_n=n
ight)=rac{1}{n^2}$  .

Does  $X_n$  converge in probability? If yes, enter the value of the limit; if no, enter DNE.

$$X_n \xrightarrow[n o \infty]{\mathbf{P}} egin{bmatrix} \mathbf{0} & & & & \\ \hline 0 & & & & \\ \hline \end{pmatrix}$$

Generating Speech Output  $\lim_{n o\infty}\mathbb{E}\left[X_n
ight]$  and  $\lim_{n o\infty}\mathsf{Var}\left(X_n
ight)$ . Enter DNE if the limit diverges or does not exist.

$$\lim_{n o\infty}\mathbb{E}\left[X_n
ight]=egin{bmatrix}0&ullet&ullet&&ulle$$

## Modes of convergence

3/3 points (graded)

Let  $X_n$  and  $Y_n$  be two sequences of random variables. For each of the following statement, say whether it is true or false. When your answer is "false", try to think of a counter example.

1. If 
$$X_n \xrightarrow[n o \infty]{\mathrm{a.s.}} X$$
 and  $Y_n \xrightarrow[n o \infty]{\mathrm{a.s.}} Y$  , then  $X_n + Y_n \xrightarrow[n o \infty]{\mathrm{a.s.}} X + Y$  .
