### **Primitive Roots of Unity (1)**

Primitive roots of unity play an important role in modular arithmetic. They were studied by Euler, Lambert, and Lagrange. Gauss first rigorously proved their existence.

Leonhard Euler (1707-1783)

Johann Heinrich Lambert (1728-1777)

Joseph-Louis Lagrange (1736-1813)

## **Primitive Roots of Unity (2)**

#### **Definition**

An integer A  $(1 \le A \le P-1)$  is a **primitive** root of unity (mod P) if  $A^K \not\equiv 1 \pmod{P}$  for  $1 \le K \le P-2$ .

### Example (P=7)

- > 3,  $3^2 \equiv 2$ ,  $3^3 \equiv 6$ ,  $3^4 \equiv 4$ ,  $3^5 \equiv 5$ ,  $3^6 \equiv 1$   $\Rightarrow 3$  is a primitive root of unity (mod 7)
- > 2,  $2^2 \equiv 4$ ,  $2^3 \equiv 1$ 
  - $\Rightarrow$  2 is **not** a primitive root of unity (mod 7)

# **Primitive Roots of Unity (3)**

$$\begin{array}{|c|c|c|c|c|c|c|c|}\hline A \ (\bmod{\,7}) & 0 & 1 & 2 & \mathbf{3} & 4 & \mathbf{5} & 6\\\hline A^2 \ (\bmod{\,7}) & 0 & 1 & 4 & \mathbf{2} & 2 & \mathbf{4} & 1\\ A^3 \ (\bmod{\,7}) & 0 & 1 & 1 & \mathbf{6} & 1 & \mathbf{6} & 6\\ A^4 \ (\bmod{\,7}) & 0 & 1 & 2 & \mathbf{4} & \mathbf{4} & \mathbf{2} & 1\\ A^5 \ (\bmod{\,7}) & 0 & 1 & 4 & \mathbf{5} & 2 & \mathbf{3} & 6\\ A^6 \ (\bmod{\,7}) & 0 & 1 & 1 & 1 & 1 & 1\\ \hline A^K \ (\bmod{\,7}) & \text{for } K = 1, 2, \dots, 6\\ \hline \end{array}$$

- > **3,5** primitive roots of unity (mod 7)
- > 1,2,4,6 not primitive roots of unity
