Microsoft: DAT203x Data Science and Machine Learning Essentials

QUESTION 5 (1/1 point)

Your dataset includes numeric columns that you intend to scale, and in some rows, these columns contain outliers.

When treating outliers and scaling data you should:

| Treat outliers first so they will not bias the results of the scaling ▾ | ✔

Answer: Treat outliers first so they will not bias the results of the scaling

---

EXPLANATION

IYou should handle the outliers first, or the extreme values in the column will affect how the numeric values are scaled.

You have used 1 of 2 submissions
