Survey**

QUESTION 4 (1/1 point)

You are creating an experiment in Azure ML Studio, and you want to remove two columns from a dataset before preparing the data for modeling.

Which two of the following modules can you use to remove the unwanted columns?

☑ Project Columns

☐ Split

☐ Join

☑ Apply SQL Transformation

☐ Clean Missing Data

✔

Note: Make sure you select all of the correct options—there may be more than one!
