## Multiple Choice

1/1 point (graded)
In a hidden Markov model, the "hidden" portion corresponds to the _____.

- ○  observation sequence

- ◉  state transition sequence ✔

- ○  timestamp sequence

- ○  location sequence

| Submit | You have used 1 of 1 attempt |
|--------|------------------------------|

## Multiple Choice

0/1 point (graded)
When we say "discrete HMM" the word "discrete" is referring to _____.

- ○  a sequence indexed by a discrete set of time points.

- ○  a sequence of discrete valued observations.

- ◉  a sequence over a discrete set of hidden states. ✖

| Submit | You have used 1 of 1 attempt |
|--------|------------------------------|

## Multiple Choice

1/1 point (graded)
True or False: A continuous hidden Markov model can be thought of as a

Gaussian mixture model with a Markovian transition property between clusters.

| ⦿ TRUE ✔ |
| --- |

| ○ FALSE |
| --- |

| Submit | You have used 1 of 1 attempt |
| --- | --- |

## Multiple Choice

1/1 point (graded)
The forward-backward algorithm used for state (1), while the Viterbi algorithm is used for state (2).

| ⦿ (1) estimation, (2) sequence learning ✔ |
| --- |

| ○ (1) sequence learning, (2) estimation |
| --- |

| Submit | You have used 1 of 1 attempt |
| --- | --- |

## Multiple Choice

1/1 point (graded)
In using the EM algorithm to estimate the HMM, we are integrating out _____.

| ○ the initial state distribution |
| --- |

| ○ the Markov transition matrix |
| --- |

| ○ the emission distribution parameters |
| --- |

| ⦿ the state transition sequence ✔ |
| --- |

| Submit | You have used 1 of 1 attempt |
| --- | --- |

# Checkboxes

1/1 point (graded)

As discussed in class, in a continuous state Markov model, which of the following are not learned?

☑ the state transition distribution

☑ the observation distribution

☐ the hidden state sequence

☑ the initial state location
✔

| Submit | You have used 1 of 1 attempt |

---

✔  Correct (1/1 point)

---

# Text Input

4.0/4.0 points (graded)

Looking at the figure below, consider the following four models we discussed in the lectures:

1. Gaussian mixture model

2. Probabilistic PCA

3. Continuous HMMs

4. Linear Gaussian Markov models

(a)                                                (b)

In the continuous state case, enter the number of the model that corresponds to

(a)

2    ✔

**2**

(b)

4    ✔

**4**

What about the discrete state case?

(a)

1    ✔

**1**

(b)

3    ✔

**3**

Submit     You have used 1 of 1 attempt
