1. Column space, solving inhomogeneous equations, determinants and inverses

 Bookmark this page

Objectives

- Apply the **rank nullity theorem** to find the dimension of the span of the columns of a matrix and the dimension of its nullspace.
- Find a basis for the span of a set of vectors.
- Relate the solutions to **inhomogeneous linear systems $Ax = b$** to solutions to the homogeneous system **$Ax = 0$** plus one particular solution.
- Compute **matrix inverses** using augmented matrices and row reduction techniques.
- Use the **determinant** to determine if a square matrix is invertible.

1. Column space, solving inhomogeneous equations, determinants and inverses
