1. Inhomogeneous linear systems and matrix exponentials

 Bookmark this page

Objectives

- Solve an **inhomogeneous systems** using **fundamental** matrices and **variation of parameters**.
- Use **diagonalization** to **decouple** an $n \times n$ system.
- Compute **matrix exponentials** for diagonalizable matrices.
- Use the **matrix exponentials** to solve an $n \times n$ system of linear differential equations.

1. Inhomogeneous linear systems and matrix exponentials
