the statement with a semi-colon which prevents output from being shown. Now suppose we need to find 'y' when 'x' is equal to pi. We could create a variable named pi, but to be accurate, we need to remember pi to many decimal places. No problem, pi is so commonly used, it is already included in MATLAB. So, we don't have to define pi to use it in calculations. Notice anything different about this last expression? We didn't use the

Variables in MATLAB (External resource)

(1.0 points possible)

Create a variable.

Create a variable named

y

whose value is -1 .

Script ?
