Solving linear systems with MATLAB (External resource)

(1.0 points possible)

The backslash command

To solve a linear system $Ax = b$ using MATLAB, type the following:

```
x = A\b
```

Try this by first creating a random 4×4 matrix A , and a random column vector b with

To create a random $m \times n$ matrix whose entries are random numbers between 0 and 1,

```
rand(m,n)
```

Script ?

Save

Reset

MATLAB Documentation (<https://www.mathworks.com/help/>)

```
1 %create a random 4x4 matrix A (values between 0 and 1)
2 A = rand(4, 4) ;
3 %create a random column vector b with 4 entries (values between 0 and 1)
4 b = rand(4, 1) ;
5
6 %Solve the linear system Ax=b using the backslash command
7 x = A\b ;
```

▶ Run Script

?

Assessment: All Tests Passed

Submit ?

- ✔ A defined correctly
- ✔ b defined correctly
- ✔ Solved for x correctly

Output

Code ran without output.
