Functions that create matrices

1:41 / 1:41

2.0x

Notice that when using a single input, the result is a square matrix, here 10 rows and 10 columns. But what if we need a rectangular matrix?

No problem! We use two input arguments instead of one. The first input specifies the number of rows and the second input the number of columns.

We can use the exact same syntax with the ONES function and RAND function, which creates a matrix of random numbers. So the next time you find yourself entering
