There are 5 categories of graded problems in 18.033x: Lecture exercises, MATLAB Recitation problems, Part A Homework, Part B Homework, and the Final Project.

Please note that all learners have access to Lecture Exercises, MATLAB Recitation, Part A and Part B Homework. Only certificate track learners have access to the Final Project.

- **Lecture exercises** These are the problems that are interspersed through the lecture content. These problems count for 10% of your grade.

These problems will be used to motivate theory, practice concepts, and review material from previous lectures. You are graded on these problems. This is where you will do the majority of your learning. We encourage you to make mistakes and learn from them!

- **MATLAB Recitation problems** Each lecture has a corresponding recitation that teaches you how to use MATLAB to answer the same kinds of questions as in lecture. These problems all allow infinite numbers of attempts to complete. The entries of these answer boxes counts towards 15% of your grade.

At MIT, recitations are group work sessions led by a teaching assistant. We are hoping to create a similar collaborative learning environment on the forum. The skills you build in recitation can help you on the part B homework. You are free to discuss the solutions to these problems on the forum before the due date! In fact, we will not reveal solutions to these problems (the MATLAB LTI doesn't allow for that!), so to ensure that you have understood these problems, please take the opportunity to discuss and learn from each other.

- **Part A Homework** Each unit has 1 Part A Homework assignment, which gives you an opportunity to practice what you learned. These problems count for 10% of your total grade.

Wait until the end of the unit to attempt these problems. These problems help you identify the concepts that you have forgotten, and aid in long-term retention. These problems are mostly mechanical—asking you to practice methods, and techniques learned in each unit. Each problem typically tests knowledge from only one section in a unit. (We won't necessarily tell you which one though!)

- **Part B Homework** Each unit has 1 Part B Homework assignment. The part B homework counts for 20% of your total grade.

The problems on this homework combine ideas from all of the sequences in the unit. These problems are mostly in the form of word problems which ask you to apply the methods learned to new scenarios.

- **Final Project** The final project is the culmination of your learning, and will account for 45% of your grade.

Certification

To earn a certificate, you must earn 60% of the points in this course.

You can see your progress towards certification by clicking on the **Progress** link above.
