Behind the scenes

Professor David Jerison

David Jerison received his Ph.D. from Princeton University in 1980, and joined the mathematics faculty at MIT in 1981. In 1985, he received an A.P. Sloan Foundation Fellowship and a Presidential Young Investigator Award. In 1999 he was elected to the American Academy of Arts and Sciences. In 2004, he was selected for a Margaret MacVicar Faculty Fellowship in recognition of his teaching. In 2012, the American Mathematical Society awarded him and his collaborator Jack Lee the Bergman Prize in Complex Analysis.

Professor Jerison's research focuses on PDEs and Fourier Analysis. He has taught single variable calculus, multivariable calculus, and differential equations at MIT several times each.

Professor Bjorn Poonen

Bjorn Poonen received an A.B. in Mathematics and Physics from Harvard in 1989, and a Ph.D. in Mathematics under Kenneth A. Ribet at U. C. Berkeley in 1994. After postdoctoral positions at MSRI and Princeton University, he served on the faculty at U. C. Berkeley before moving to MIT to 2008. Poonen's research focuses on number theory and algebraic geometry; in particular, he is interested in developing methods for determining the rational number solutions to multivariable polynomial equations, but also interested in proving that certain problems are undecidable.

Professor Poonen is the creator of the lecture notes, which became the basis for this and 4 of the 5 MOOCs in the differential equations series. These notes were based work of many who came before him in teaching this course.

Course Authors

Karene Chu

Karene Chu received her Ph.D. in mathematics from the University of Toronto in 2012. Since then she has been a postdoctoral fellow first at the University of Toronto/Fields Institute, and then at MIT, with research focus on knot theory. She has taught single and multi-variable calculus, and linear algebra at the University of Toronto where she received a teaching award.

You may already know Karene from her work on Calculus 1B: Integration (<https://www.edx.org/course/calculus-1b-integration-mitx-18-01-2x>) and Calculus 1C: Coordinate Systems and Infinite Series (<https://www.edx.org/course/calculus-1c-coordinate-systems-infinite-mitx-18-01-3x>).

Jen French

Jen French is an MITx Digital Learning Scientist in the MIT math department. She earned her Ph.D. in mathematics from MIT in 2010, with specialization in Algebraic Topology. You may already know Jen from her work on the Calculus series Calculus 1A: Differentiation (<https://www.edx.org/course/calculus-1a-differentiation-mitx-18-01-1x>), Calculus 1B: Integration (<https://www.edx.org/course/calculus-1b-integration-mitx-18-01-2x>), and Calculus 1C: Coordinate Systems and Infinite Series (<https://www.edx.org/course/calculus-1c-coordinate-systems-infinite-mitx-18-01-3x>) available on edX.

Differential equations is the first course she worked on residentially at MIT. She is thrilled to be able to make this content available to all of you here.

In the videos

Professor Arthur Mattuck

Arthur Mattuck received his Ph.D. from Princeton University in 1954. He joined the MIT mathematics faculty in 1958. His research interests focus on problems in algebraic geometry. In 1992, he was among the first group of faculty to be designated Margaret MacVicar Fellows.

Professor Mattuck has been widely recognized as one of the Institute's most effective and innovative lecturers of core subjects, developing much of the calculus sequence used at MIT. His 1981 publication, *The Torch and the Firehose: A Guide To Section Teaching*, has served as a model guide both within MIT and outside.

Miles Couchman

Miles is a Ph.D. student in the Department of Mathematics at MIT doing research in the area of fluid mechanics. He is originally from Ontario, Canada, and

Professor Gilbert Strang

Gilbert Strang is the MathWorks Professor of Mathematics as of 2011, the first holder of this faculty chair. He came to MIT upon completing the Ph.D. from UCLA in 1959 under the direction of Peter Henrici. He received the S.B. from MIT in 1955, and the B.A. and M.A. as a Rhodes Scholar from Oxford University in 1957. He joined the MIT mathematics faculty in 1962, professor in 1970.

Professor Strang's research focuses on mathematical analysis, linear algebra and PDEs. He has written textbooks on linear algebra, computational science, finite elements, wavelets, GPS, and calculus. You can find many of his video lectures on MIT's OpenCourseWare.

Sam Turton

Sam is a third year graduate student in the Department of Mathematics at MIT, with a focus on fluid mechanics. He grew up in the United Kingdom, and completed his undergraduate degree at the University of Cambridge. At MIT, he has been a Teaching Assistant for both 18.02 (Multivariable Calculus) and 18.03 (Differential Equations).
