Reflecting shapes

Learn how to find the image of a given reflection.

In this article we will find the images of different shapes under different reflections.

The line of reflection

A reflection is a transformation that acts like a mirror: It swaps all pairs of points that are on exactly opposite sides of the line of reflection.

The line of reflection can be defined by an equation or by two points it passes through.

Part 1: Reflecting points

Let's study an example of reflecting over a horizontal line

We are asked to find the image A' of $A(-6, 7)$ under a reflection over $y = 4$.
