

[Course](#) > [4. Filtering](#) > [4.1. Introduction](#) > 4.1.1. Description & Outline

4.1.1. Description & Outline

1. Digital Images
2. Of Colors & Dimensions
3. Resizing, Interpolation & Mathematical Operations
- 4. Filtering**

5. Segmentation, from Intensities to Objects
6. Regions of Interest & Results
7. Color in Depth, Projections & Reslicing
- Extra. ImageJ Macro Language Programming Primer

Week Overview

- Section 1: Introduction
- Section 2: Spatial Filtering
- Section 3: Fourier Filtering
- Section 4: Conclusion

Description

After looking at mathematical operations last week, we cover the more advanced topic of filtering, where the outcome of a pixel operation is dependent on the neighborhood of that pixel. You will see how filtering can help enhance or suppress features in images to ease subsequent analysis workflows. You'll be able to identify and use linear filters, nonlinear filters and apply Fourier filters to images.

At the end of the week, you will know how and where these filters are located in Fiji and how to choose an appropriate filter to ease your image analysis workflow, especially when we reach the topic of Segmentation next week.
