6.4.2. Batch Processing - Practice Assessment

Batch Processing Conditions

0 points possible (ungraded)

Batch processing of image processing data is the ultimate goal when building analysis workflows.

Read the statements below and check all that are true

☐ As long as we have a good segmentation technique, the quality of the image acquisition does not affect the results.☒ It is important to have an output for quality control (a mask for checking segmentation, for example) ✓☒ One should always test image analysis workflows on multiple images of an experiment to check their robustness ✓☐ The built-in batch processor can never overwrite your images[Submit](#)
