Writing a Macro to Compute New Columns

- Start from the previous results table or [download it here](#)
- Open a new Script Editor Window
Plugins>New>Macro

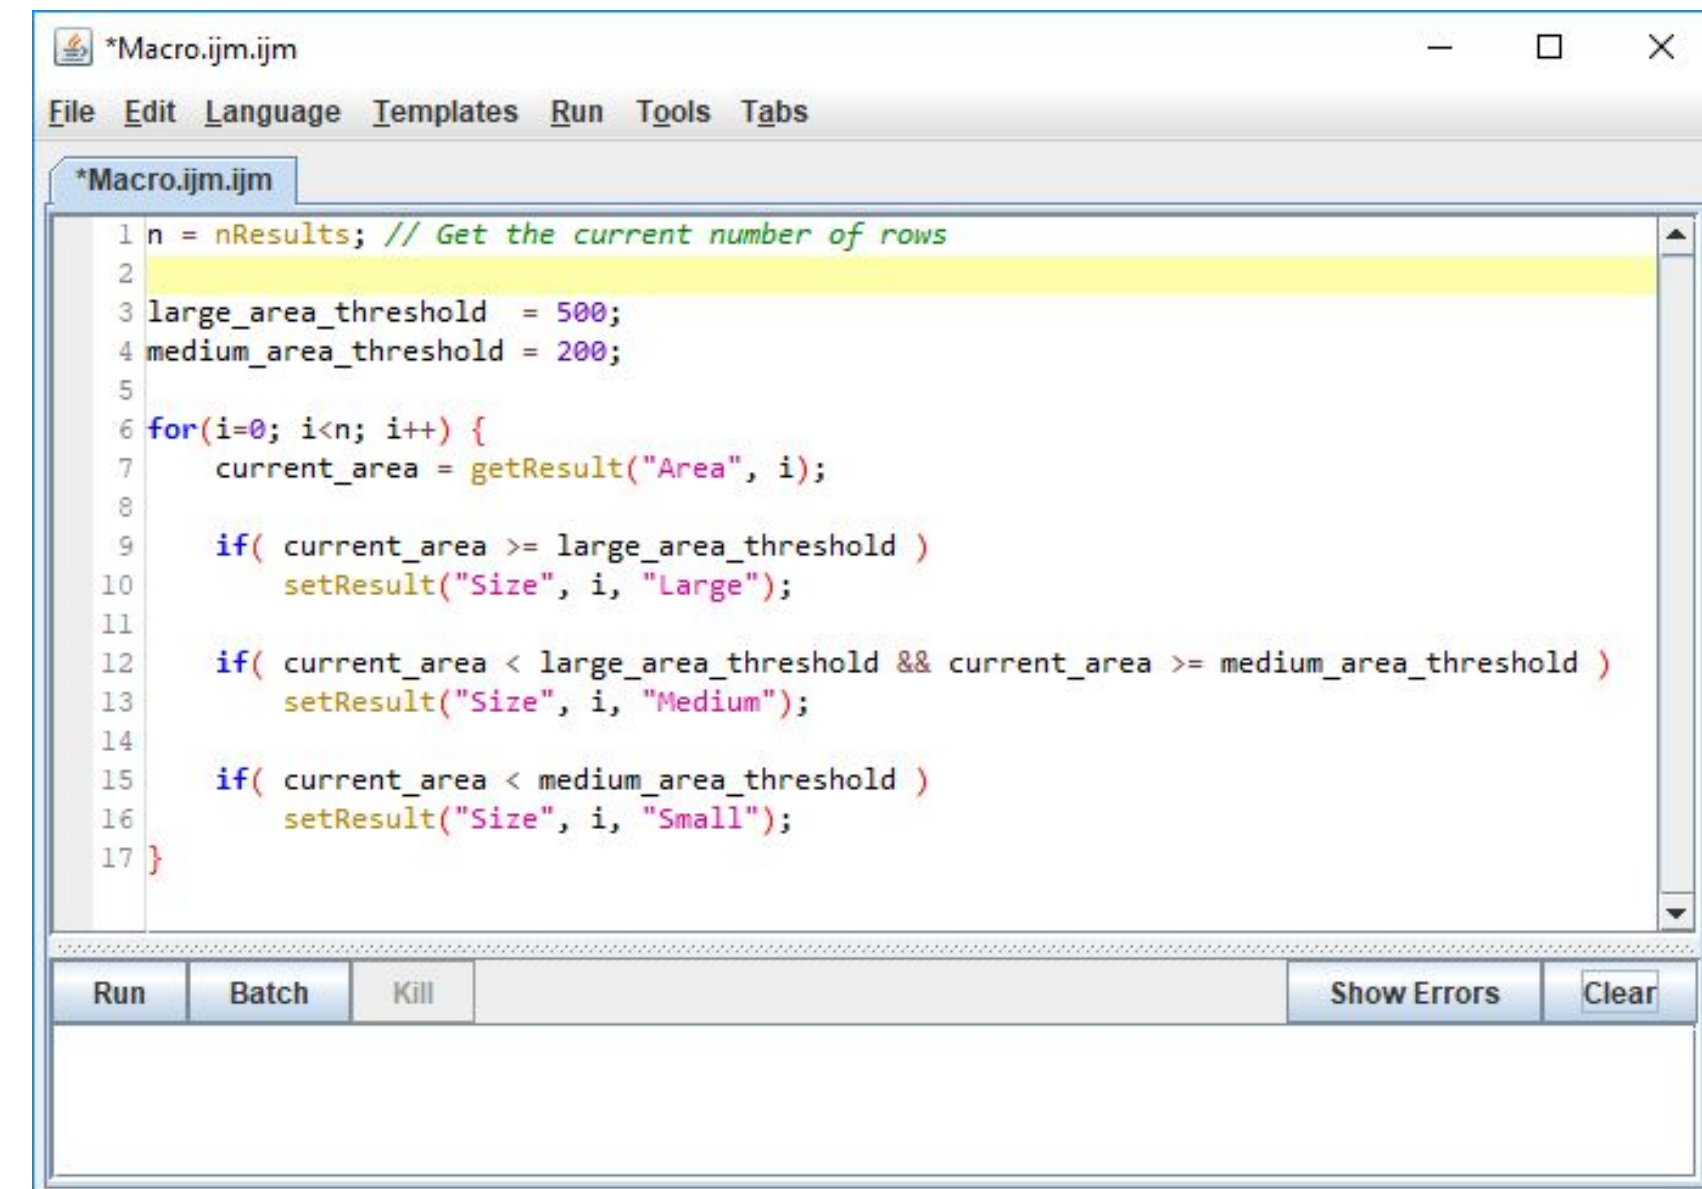

The screenshot shows a window titled 'Results' with a menu bar containing 'File', 'Edit', 'Font', and 'Results'. Below the menu bar is a table with 10 columns: an unlabeled index column, 'Label', 'Area', 'Mean', 'Min', 'Max', 'Circ.', 'AR', 'Round', and 'Solidity'. The table contains 6 rows of data, all with 'blobs.gif' in the 'Label' column.

	Label	Area	Mean	Min	Max	Circ.	AR	Round	Solidity
18	blobs.gif	289	187.875	128	240	0.922	1.131	0.884	0.935
19	blobs.gif	676	198.994	128	240	0.780	1.483	0.675	0.909

Writing a Macro to Compute New Columns

- Start from the previous results table or download it here
- Open a new Script Editor Window Plugins>New>Macro
- Write the following code. You can download it from the Resources Section below this presentation

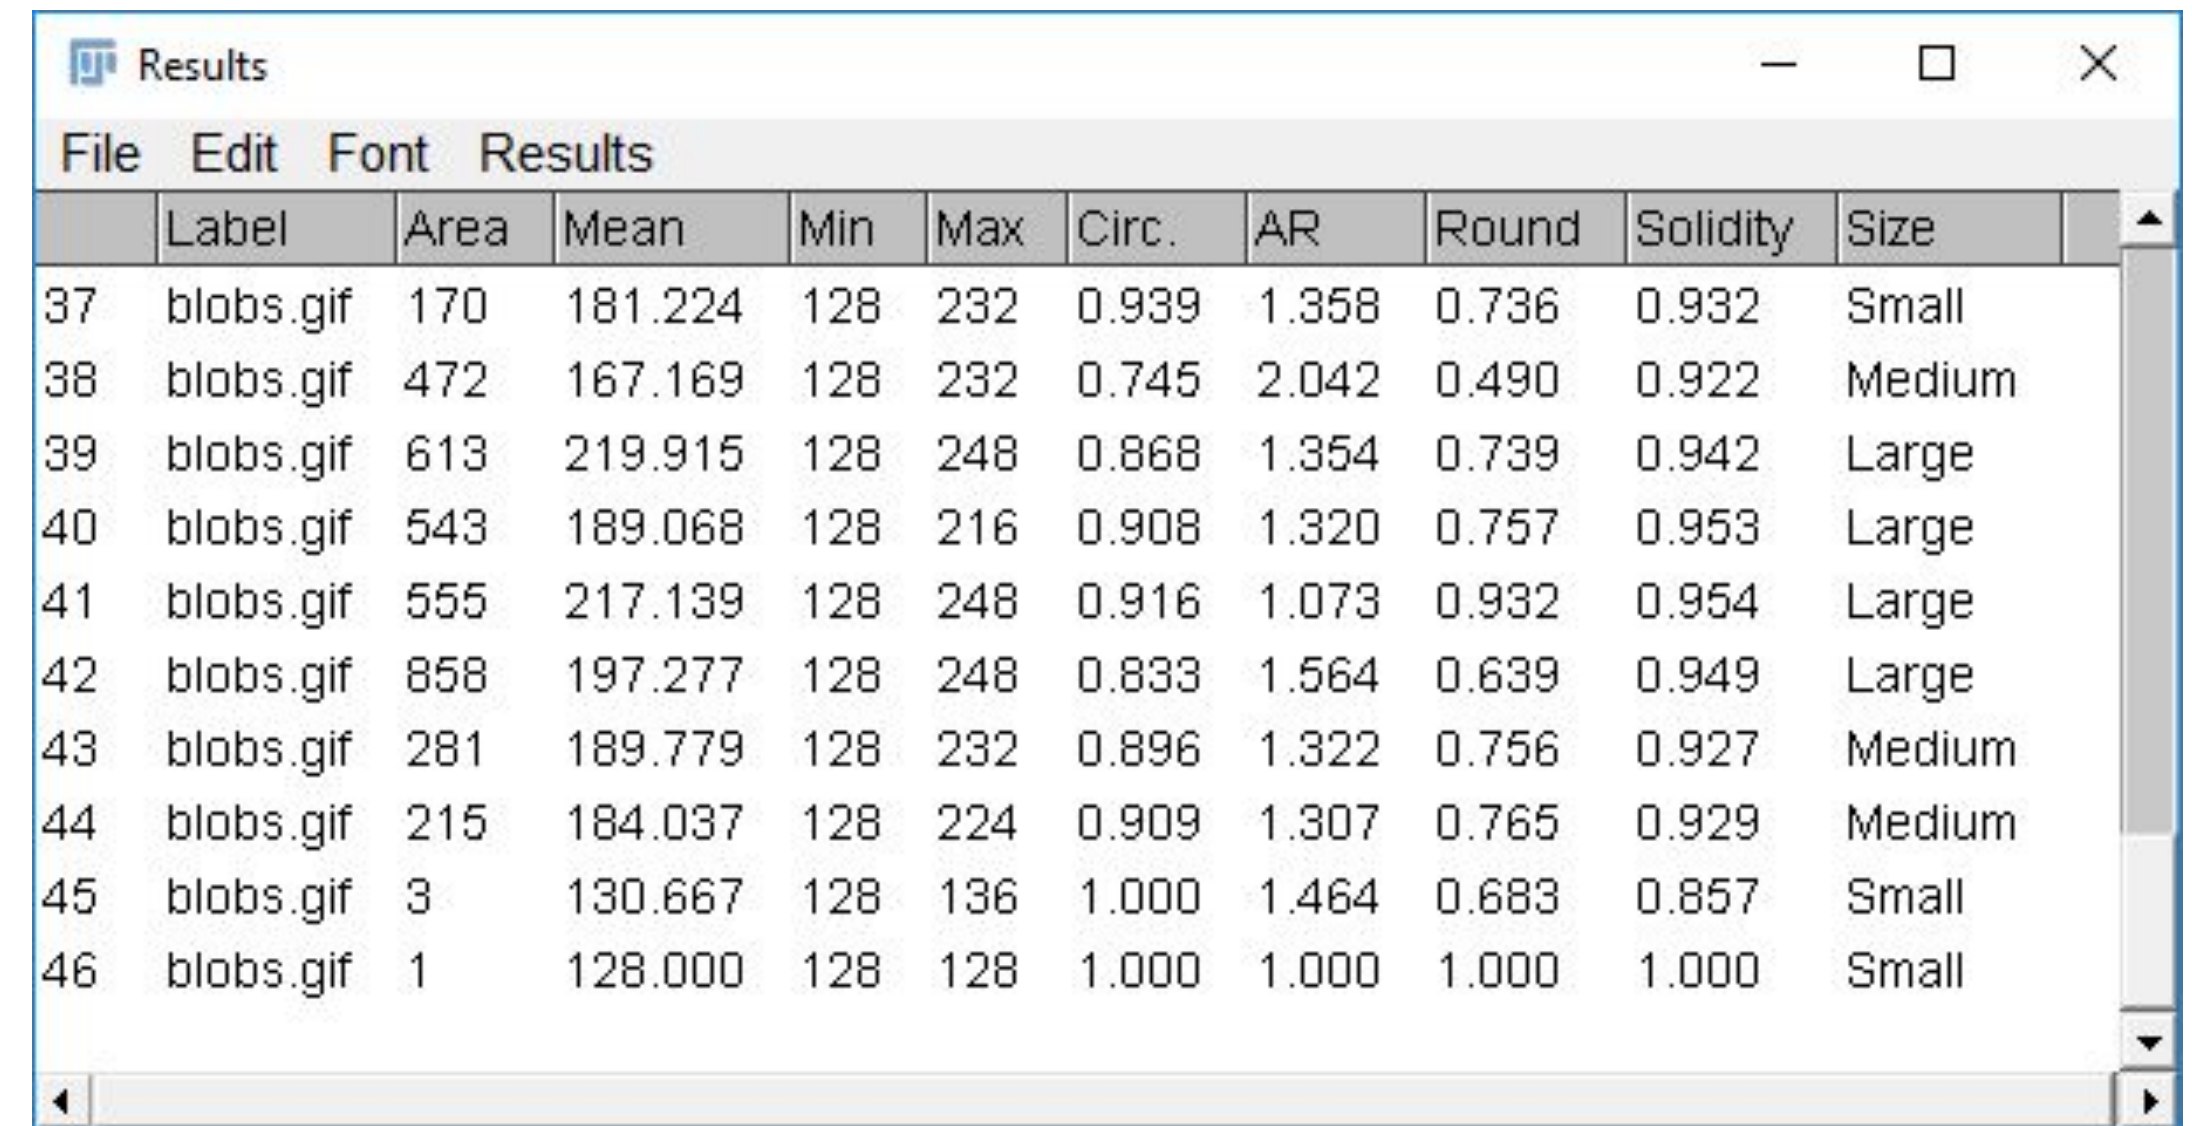

```
n = nResults; // Get the current number of rows
large_area_threshold = 500;
medium_area_threshold = 200;

for(i=0; i<n; i++) {
    current_area = getResult("Area", i);
    if( current_area >= large_area_threshold ) setResult("Size", i, "Large");
    if( current_area < large_area_threshold && current_area >= medium_area_threshold ) setResult("Size", i, "Medium");
    if( current_area < medium_area_threshold ) setResult("Size", i, "Small"); }
```
