7.3.3. Color & Color Models - Practice Assessment

Color & Color Models

0 points possible (ungraded)

Select all that are true.

☐ Converting an image to HSB can remove image saturation (clipping of pixel intensities).

☒ Color Deconvolution is sensitive to the White Balance.

☐ It is straightforward to compare Histochemistry staining intensities.

☐ Measuring DAB mean intensity leads to reliable results.

Submit

Use the DAB images in the [week-07](#) to make a script that output a meaningful measure of DAB.

Please find below some hints. You will have to pay attention to :

- the names of the images if you duplicate them.
- the threshold you might use
- the background color of your images
- the output measurements and the table
