E.2.2. Variables - Practice Assessment

Extra Week: ImageJ Macro Language Programming Primer

Section 1: Introduction

Section 2: Variables & Operators

Section 3: Arrays

Section 4: Conditionals

Section 5: Loops

Section 6: Macro Functions

Section 7: Good Coding Practices

Operating on Variables I

0 points possible (ungraded)

If you run the code

```
print("\\Clear");  
a = 11;  
b = -3 ;  
print ( a + b );
```

The result in the "Log" window is :

✓ Answer: 8

i Answers are displayed within the problem

Operating on Variables II

0 points possible (ungraded)

If you run the code :

```
print("\\Clear");  
a = "1";  
b = 1 ;  
print ( a + b );
```

The result in the "Log" window is :

Submit

String Variables

0 points possible (ungraded)

If you run the code :

```
print("\\Clear");  
a = "myString";  
b = "aSecondString" ;  
print ( a + b );
```

The result in the "Log" window is :

☐ myString aSecondString

☐ myStringaSecondString

☐ my String a Second String

☐ "myString"+"aSecondString"

Concatenation

0 points possible (ungraded)

Using the concatenation of variable , `print(a + b)` , you have to print in the "Log" window the string :

"The image is blurred."

Select the correct a and b variables :

☐ a = "The image"☐ b = "The image "☐ a = "The image "☐ b = "is blurred."
