Question 6

1.0/1.0 point (graded)

The formulation of the question below is incomplete. It is included to avoid any ambiguity. The complete question and proposed solutions are available in the PDF file.

Consider the following primal linear optimization problem: $\max 3x_1 + 4x_2$ s.c: $x_1 + 2x_2 \leq 10$, $x_1 + x_2 \leq 8$, $3x_1 + 5x_2 \leq 40$, $x_1, x_2 \geq 0$. The optimal solution of the primal is $x^* = (6, 2)$. By using the complementary slackness conditions, determine which one of the following solutions is the optimal solution of the dual.

☒ Solution 1: $y^* = (1, 2, 0)$.

☐ Solution 2: $y^* = (1/5, 3, 0)$.

☐ Solution 3: $y^* = (3/5, 0, 1/2)$.

☐ Solution 4: $y^* = (0, 2, 1/4)$.
