Question 5

1.0/1.0 point (graded)

The formulation of the question below is incomplete. It is included to avoid any ambiguity. The complete question and proposed solutions are available in the PDF file.

Consider a network (N, A) , where N is the set of nodes and A is the set of arcs. If the supply or demand of each node is given as vector $s_i, i \in N$, the cost of transporting a unit of flow on each arc as $c_{ij}, (i,j) \in A$, while $x_{ij}, (i,j) \in A$ are the decision variables determining the flow on each arc (i,j) , which of the following is a correct formulation of the transshipment problem? Select the cirrect solution.

☐ Solution 1.

☒ Solution 2.

☐ Solution 3.

☐ Solution 4.
