Course structure

 Bookmark this page

The course is structured into 5 sections.

- Networks: you will be introduced to the mathematical formalism of graphs and networks.
- Transshipment: you will learn about the transshipment problem (also called "minimum cost flow problem"), its properties, and some special instances.
- Shortest path: you will learn about algorithms to find the shortest path in a network.
- Discrete optimization: you will learn how to specify a discrete optimization problem.
- Exact methods for discrete optimization: you will be introduced to two algorithms to solve discrete optimization problems.
