factorization and we didn't actually explicitly form Q -- maybe we can take those transformations and apply them one by one as opposed to forming Q . And notice that it's obviously important that we use only unitary matrices to do this. Now, what kind of unitary matrices are at our disposal? Well, we could just say, "Ah, we can compute a Householder transformation just off of these two entries thereby introducing a

Homework 10.3.2.1

1/1 point (graded)
Propose formulas for γ and σ such that

$$\begin{pmatrix} \gamma & -\sigma \\ \sigma & \gamma \end{pmatrix}^T \underbrace{\begin{pmatrix} \chi_1 \\ \chi_2 \end{pmatrix}}_{\boldsymbol{x}} = \begin{pmatrix} \|\boldsymbol{x}\|_2 \\ 0 \end{pmatrix},$$

where $\gamma^2 + \sigma^2 = 1$.

- ☐ $\gamma = \frac{\chi_1}{\|\boldsymbol{x}\|_2}$ and $\sigma = -\frac{\chi_2}{\|\boldsymbol{x}\|_2}$
- ☐ $\gamma = -\frac{\chi_1}{\|\boldsymbol{x}\|_2}$ and $\sigma = \frac{\chi_2}{\|\boldsymbol{x}\|_2}$
- ☒ $\gamma = \frac{\chi_1}{\|\boldsymbol{x}\|_2}$ and $\sigma = \frac{\chi_2}{\|\boldsymbol{x}\|_2}$
- ☐ $\gamma = -\frac{\chi_1}{\|\boldsymbol{x}\|_2}$ and $\sigma = -\frac{\chi_2}{\|\boldsymbol{x}\|_2}$

Solution

For a complete solution, see the [notes](#).
