matrix A ? And, you know, we notice, hey, we know what V is. Now when we compute the Spectral Decomposition it is not necessarily the case that the eigenvalues come out from largest to smallest. So we may have to put a permutation on our matrix Σ in order to make it have its entries ordered from largest to smallest. But, once we have that, we can merely take the square root of the diagonal elements.

[In Homework 11.2.1.2](#)

Why D has real positive values if A is nonsingular, so is $A^H A$? We don't kno...

4

Homework 11.2.1.1

1/1 point (graded)
Let $A \in \mathbb{C}^{m \times m}$ be nonsingular and $A^H A = Q D Q^H$, the Spectral Decomposition of $A^H A$. Give a formula for U , V , and Σ so that $A = U \Sigma V^H$ is the SVD of A . (Notice that A is square.)

dictates now that happens. Now it turns out that the condition number of the matrix also impacts how relative error in the matrix gets amplified into the accuracy of the eigenvalues and eigenvectors that are computed. So that's a conditioning problem. The other problem is: Is the algorithm that we're executing numerically stable? Now it turns out that's when you form a Hermitian A , well we already saw this. That squares the ...

Homework 11.2.1.2

1/1 point (graded)
Let $A \in \mathbb{C}^{m \times n}$ have full column rank and let $A^H A = Q D Q^H$, the Spectral Decomposition of $A^H A$. Give a formula for the Reduced SVD of A .

Homework 11.2.1.3

1/1 point (graded)
Let $\mathbf{A} \in \mathbb{C}^{m \times n}$ be of rank r and

$$\mathbf{A}^H \mathbf{A} = \left(\begin{array}{c|c} \mathbf{Q}_L & \mathbf{Q}_R \end{array} \right) \left(\begin{array}{c|c} \mathbf{D}_{TL} & \mathbf{0}_{r \times (n-r)} \\ \hline \mathbf{0}_{(n-r) \times r} & \mathbf{0}_{(n-r) \times (n-r)} \end{array} \right) \left(\begin{array}{c|c} \mathbf{Q}_L & \mathbf{Q}_R \end{array} \right)^H.$$

be the Spectral Decomposition of $\mathbf{A}^H \mathbf{A}$, where $\mathbf{Q}_L \in \mathbb{C}^{n \times r}$ and, for simplicity, we assume the diagonal elements of $\mathbf{D}_{TL}$ are ordered from largest to smallest. Give a formula for the Reduced SVD of $\mathbf{A}$.
