orthogonal,
to our space. Alright?
So, but we're kind of
reasoning through
that. What do we
know? Okay? Well,
we know that if this
here is perpendicular
to it,
it must live in the left
null space of A. Why?
Because we saw that
the left null
space of A is the set
of all vectors that are
orthogonal to the
column space
of A. Alright? So,
what does that
mean? That means
that A Hermitian
transpose
times the vector b

Homework 4.2.2.1

1/1 point (graded)
Let $A \in \mathbb{C}^{m \times m}$ be nonsingular. Then $A^{-1} = A^\dagger$.

Homework 4.2.2.2.

1/1 point (graded)
Let $A \in \mathbb{C}^{m \times n}$ have linearly independent columns.

$AA^\dagger = I.$

SOMETIMES

 Answer: SOMETIMES

Solution:

For a complete solution, see [the notes](#).
