Table of Contents

[Bookmark this page](#)

The table of contents does not require much in the way of creativity or originality, but it is nonetheless a very important part of any report. It will give the reader a rough idea of what to expect in the report, and how the report will be structured. Additionally, it can be used to quickly find out where to look for certain information.

To make the table of contents as useful as possible, all chapters, sections and subsections should have informative titles. Page numbers should be employed to show where all the different report elements can be found.

Let's use the template version to highlight the formatting conventions for a table of contents:

Contents

Summary	3
List of variables	6
1 Introduction	7
2 Title of chapter	8
2.1 Title of section	8
2.1.1 Title of first subsection	8
2.1.2 Title of second subsection	8
3 Some functions in L ^A T _E X	9
3.1 Lists	9
3.1.1 Bullet list	9
3.1.2 Numbered list	9
3.2 Equations	9
3.3 Floats	10
3.3.1 Figures	10
3.3.2 Tables	10
4 Conclusions	12

Bibliography	13
A Title of first appendix	14
B Title of second appendix	15

Take note of the following conventions:

- The Summary, List of variables and Bibliography do not have chapter numbers.
- The Introduction, core chapters and Conclusions chapter have regular chapter numbers, and their

Exercise A

1/1 point (graded)

Which of the following statements about the table of contents are true?

Multiple answers are correct.

- ☒ Chapters and sections should be numbered.
- ☐ The reference list is an appendix.
- ☐ The conclusion is not a numbered chapter.
- ☒ It should be possible to identify the topic of the report using the table of contents.

Submit

You have used 3 of 3 attempts

Exercise B

1/1 point (graded)

How can you make the reader understand what the topic of the report is, from your table of contents alone?

- ☒ Mention the topic in a chapter title, of Chapter 2 for example. ✓
- ☐ Place the topic in the title of the table of contents.
- ☐ Mention the topic in every chapter title.
- ☐ Place the topic explicitly in the subtitle of the table of contents.

Answer

Correct:

The easiest way is to name the topic of the report in Chapter 2, (Chapter 1 is always the introduction). If you mention the topic in each chapter, the titles would be almost the same. A table of contents never has a subtitle.

4. List of variables..... 4

5. Introduction..... 5

How can you improve this table of contents?
Check the correct answers.

☐ All full stops should be removed; they spoil the lay-out.

☒ The page numbers should be lined up to improve the lay-out. ✓

☒ All parts before the introduction should not be numbered. ✓

☒ The table of contents should not be in the table of contents. ✓

☐ The list of variables is in the wrong place;

Conclusion.....	19
Sources.....	20

What are the most important mistakes the author has made?
2 correct answers.

- ☒ The author has not numbered the core chapters.
- ☒ The topic of the report is unclear.
- ☐ The list of sources is in the wrong place.
- ☐ Appendices are missing.

Contents

Summary	ii
List of symbols	v
1 Introduction	1
2 Original wing box design	3
2.1 Stiffened box structures background information	3
2.2 Stress calculations	3
2.3 Design choices	5
2.4 Resulting wing box design	6
2.5 Predicted buckling and failure mechanism	7
3 Production, testing and results of the original wing box design	8
3.1 Production of the original wing box	8
3.2 Test setup for testing the original wing box	9
3.3 Results of the original wing box test	10
4 Top panel designs	11
4.1 Adaptation of the wing box design	11
4.2 Redesign of the metal top panel	11
4.3 Design of the composite top panel	13
5 Test instrumentation and production plan of the top panels	15
5.1 Compression specimen test instrumentation	15
5.2 Production plan for the top panels	16
5.3 Deviations from production plan	16
5.4 Recommendations for future production	17
6 Analysis of the top panel designs	18
6.1 Original and redesigned top panel test results	18
6.2 Analysis of the original and redesigned top panel	18
6.3 Composite panel	19
7 Recommendations for final wing box design	21
7.1 Further testing	21
7.2 Combining the original wing box and the top panel redesign	21
7.3 Using of sandwich panels	22
8 Conclusion	23
Bibliography	24
Appendix A Compression test procedure	25
Appendix B Top panel redesign Python code	26
Appendix C Strain gauges locations for the original wing box test	29
Appendix D Original design failure sequence	31
Appendix E Iterative calculation results	34
Appendix F CATIA drawings	37

What is the topic of the report?

Type in the answer.

wing box design

Answer

Correct: Indeed, the topic is on wing boxes.

Exercise F

1/1 point (graded)

What does the table of contents shown in the previous exercise tell your about the report and the design project it describes?

Check all the boxes that apply.

Pursue a verified certificate

[Upgrade Now \(\\$49\)](#)

☒ A wing box was designed during the project. ✓

☒ The top panel was redesigned. ✓

☒ There is an original wing box and a final wing box design. ✓

☐ The wing box was tested twice.

☒ The original wing box design had a metal top panel. ✓

☒ Later on in the project, a composite top panel was made. ✓

☐ It is clear what a wing box is.

☐ There were no changes in the production plan for the top panels.

Answer

Correct:

From Chapter 2, it becomes clear that the report is about the design of a wing box.

The top panel was redesigned; this becomes clear from Section 6.1.

There is an original wing box and a final wing box design. This becomes clear from Chapters 2 and 7.

The original wing box design had a metal top panel: Section 4.2.

Later, a composite panel was made: Section 4.3 and Chapter 5.

With these instructions, now write your own Table of Contents.

Tip: Let someone read the table of contents without telling him/her anything about a writing assignment. Can he or she define what the topic is? Can he/she describe the steps in your research project?

Instructions on how to create your table of contents in Latex, will be given in Section 4.6.

Next, a report component that may help the reader when the model is complicated: a list of variables.
