of y . And this is the 2-norm of x plus y . Now if this is a right triangle then we know that this squared plus that squared must be equal to that squared. What does that mean? The 2-norm of x squared plus the 2-norm of y squared must be equal to the 2-norm of x plus y squared. Let's see what that means about x and y . Well, this we can write this $x^T x$. This we can write it as $y^T y$. And this we can write as $x^T (x+y)$
