Verified Certificate

 THE UNIVERSITY of TEXAS SYSTEM

This is to certify that

Sandipan Dey

successfully completed and received a passing grade in

UT.ALA:Advanced Linear Algebra: Foundations to Frontiers

a course of study offered by UTAustinX, an online learning initiative of University of Texas System.

 **Maurilio Pugliesi**
Professor
UniversityX

 **Justine Doe, Ph.D.**
Professor
UniversityX

equations, we could
instead write this as
the following matrix.
Let's see these are
the columns of the
matrix. The first
column is all ones
because
it's really χ_0 to the
zeroth power, χ_1 to
the zeroth power, and
so forth. So
here we have the
matrix which must
multiply γ_0 ,
 γ_1 , and so
forth
through γ_n
minus 1. And that
should be equal to
 ϕ_0 , ϕ_1 , through
 ϕ_{n-1} .
Okay, but again

HW 3.1.1.1. Shouldn't condition number of X be 1 for $n = 0$?
Shouldn't $\kappa_2(X)=1$ when...

6

1/1 point (graded)
Choose $\chi_0, \chi_1, \dots, \chi_{m-1}$ to be equally spaced in the interval $[0, 1]$:
for $i = 0, \dots, m - 1, \chi_i = ih$, where $h = 1/(m - 1)$. Write Matlab
code to create the matrix

$$X = \begin{pmatrix} 1 & \chi_0 & \cdots & \chi_0^{n-1} \\ 1 & \chi_1 & \cdots & \chi_1^{n-1} \\ \vdots & \vdots & & \vdots \\ 1 & \chi_{m-1} & \cdots & \chi_{m-1}^{n-1} \end{pmatrix}$$

as a function of n with $m = 5000$. Plot the condition number of X ,
 $\kappa_2(X)$, as a function of n (Matlab's function for computing $\kappa_2(X)$ is
cond(X) .)

Homework 3.1.1.2

1/1 point (graded)
Choose $\chi_0, \chi_1, \dots, \chi_{m-1}$ to be equally spaced in the interval $[0, 1]$:
for $i = 0, \dots, m - 1, \chi_i = ih$, where $h = 1/(m - 1)$. Write Matlab
code to create the matrix

$$X = \begin{pmatrix} 1 & P_1(\chi_0) & \cdots & P_{n-1}(\chi_0) \\ 1 & P_1(\chi_1) & \cdots & P_{n-1}(\chi_1) \\ \vdots & \vdots & & \vdots \\ 1 & P(\chi_{m-1}) & \cdots & P_{n-1}(\chi_{m-1}) \end{pmatrix}$$

as a function of n with $m = 5000$. Plot $\kappa_2(X)$ as a function of n . To
check whether the columns of X are mutually orthogonal, report
 $\|X^T X - D\|_2$ where D equals the diagonal of $X^T X$.

Correct (1/1 point)

Video

of kind of looks like
an inner product
doesn't it? And it kind
of looks like a
orthogonality
condition. So what
you can then do is do
the exact same
thing that we did

berore, whnch is
create a matrix with
as its columns the
polynomial of degree
0 evaluated at chi 0,
chi 1 and so forth and
then the
polynomial with
degree 1 evaluated at
chi 0, chi,
and so forth. And
then multiplying that
times the vector that
now become the

Video

What we've just seen
is an example where
if you formulate the
problem better, in
**this case, if you
make it so that the
family of
polynomials with
which you**
create your n minus
first degree
polynomial, if that
family of polynomials
