say, "I want to take a multiple of

the first row and subtract it off that row." So notice that if you do minus one times the first row and then subtract it off, that's the same as adding the two rows together. And that would put a zero right here. So minus 1 times minus 1

subtracted off of 2 would give you a 1. And minus 1 times 1 subtracted off of 1

would give you a 2. And then minus 1 times 1 subtracted off of minus 1 would

give you 0. And then

Homework 5.1.1.2

1/1 point (graded)

The execution of the LU factorization algorithm with

$$A = \begin{pmatrix} 2 & -1 & 1 \\ -2 & 2 & 1 \\ 4 & -4 & 1 \end{pmatrix}$$

in the video overwrites A with

$$\begin{pmatrix} 2 & -1 & 1 \\ -1 & 1 & 2 \\ 2 & -2 & 3 \end{pmatrix}.$$

Multiply the L and U stored in A and compare the result with A . In other words, compute $A - LU$:
