Verified Certificate

This is to certify that

Sandipan Dey

successfully completed and received a passing grade in

UT.ALA:Advanced Linear Algebra: Foundations to Frontiers

a course of study offered by UTAustinX, an online learning initiative of University of Texas System.

Maurilio Pugliesi
Professor
UniversityX

Justine Doe, Ph.D.
Professor
UniversityX

standard basis
vectors. Remember
these are the vectors
where you

have a 1 that's the
first standard basis
vector. And then the
second standard

basis vector and so
forth. Now you're
going to do a
homework in which
you show

that if you take the
first standard basis
vector to be your first
search

direction, then you
actually do exactly
the updates that you
did when you did

the Gauss-Seidel
iteration. Hmm,

? Cycling through standard basis vectors	2

Homework 8.2.3.1

1/1 point (graded)
For

```

Given :  $A, b, x^{(0)}$ 
 $r^{(0)} := b - Ax^{(0)}$ 
 $k := 0$ 
while  $r^{(k)} \neq 0$ 
     $p^{(k)} :=$  next direction
     $q^{(k)} := Ap^{(k)}$ 
     $\alpha_k := \frac{p^{(k)T}r^{(k)}}{p^{(k)T}q^{(k)}}$ 
     $x^{(k+1)} := x^{(k)} + \alpha_k p^{(k)}$ 
     $r^{(k+1)} := r^{(k)} - \alpha_k q^{(k)}$ 
     $k := k + 1$ 
endwhile
```

show that if $p^{(0)} = e_0$, then

$$\chi_0^{(1)} = \chi_0^{(0)} + \frac{1}{\alpha_{0,0}} \left(\beta_0 - \sum_{j=0}^{n-1} \alpha_{0,j} \chi_j^{(0)} \right) = \frac{1}{\alpha_{0,0}} \left(\beta_0 - \sum_{j=1}^{n-1} \alpha_{0,j} \chi_j^{(0)} \right)$$

☒ done

Solution:

For a complete solution see the [notes](#).

So, what you notice is that you get the Gauss-Seidel iteration. It is not that one iteration of this is equal to one iteration of the Gauss Seidel iteration.

No, instead n iterations, if a is n by n, n iterations of this is equivalent

to one iteration of Gauss-Seidel.
