

`LinearAlgebra`BLAS``

AXPY

`AXPY[ $\alpha$ ,  $x$ ,  $y$ ]`
computes the vector $y+\alpha x$ and resets y to the result.

Details and Options

Examples open all

Basic Examples (1)

Load the BLAS package:

In[1]:= `Needs["LinearAlgebra`BLAS`"]`

Compute $y=2\{1, 2, 3\}+y$:

In[2]:= `y = {-1, 2, 1};`
`AXPY[2, {1, 2, 3}, y];`
`y`

Out[2]= `{1, 6, 7}`
